

First tests of SLAF and Stochastic Physics in GLAMEPS

J. A. García-Moya & C. Santos
NWP - Spanish Met Service - AEMET

Hirlam - Aladin All Staff Meeting
Brussels - 7-10 April 2008

Introduction

- ☀ Testing the framework of *GLAMEPS*
- ☀ Very crude implementation
- ☀ 15 days parallel test:
 - ☀ 2007100100 - 2007101500
- ☀ Area EPS71 and 10 members + control
- ☀ 72 hours forecast at 00 and 12 UTC
- ☀ Experiments:
 - ☀ EPS → Standard downscaling of ECMWF EPS.
 - ☀ SLF → SLAF
 - ☀ TEP → TEPS (met.no)
 - ☀ STP → Stochastic Physics + EPS
 - ☀ STF → Stochastic Physics + SLAF
 - ☀ TEF → Stochastic Physics + TEPS (met.no)

SLAF - Errors H+48

☀ SLAF ($AN \pm K \cdot (AN - FCHH)$, $k=cte.$)

☀ Experiments:

- | | |
|------------|--------------------------------------|
| ☀ Control | $ANP = AN$ |
| ☀ 1 and 2 | $ANP = AN \pm 2.5 \cdot (AN - FC12)$ |
| ☀ 3 and 4 | $ANP = AN \pm 2 \cdot (AN - FC24)$ |
| ☀ 5 and 6 | $ANP = AN \pm 1.5 \cdot (AN - FC36)$ |
| ☀ 7 and 8 | $ANP = AN \pm 1 \cdot (AN - FC48)$ |
| ☀ 9 and 10 | $ANP = AN \pm 0.5 \cdot (AN - FC60)$ |

Stochastic Physics

- ✱ ECMWF scheme
- ✱ Perturbing Physics tendencies
- ✱ Perturbations from **+0.5 to +1.5**
- ✱ Keeping the same value of the perturbation coefficient for **1 hour** and at squares of **10 x 10 degrees latxlon**

Verification

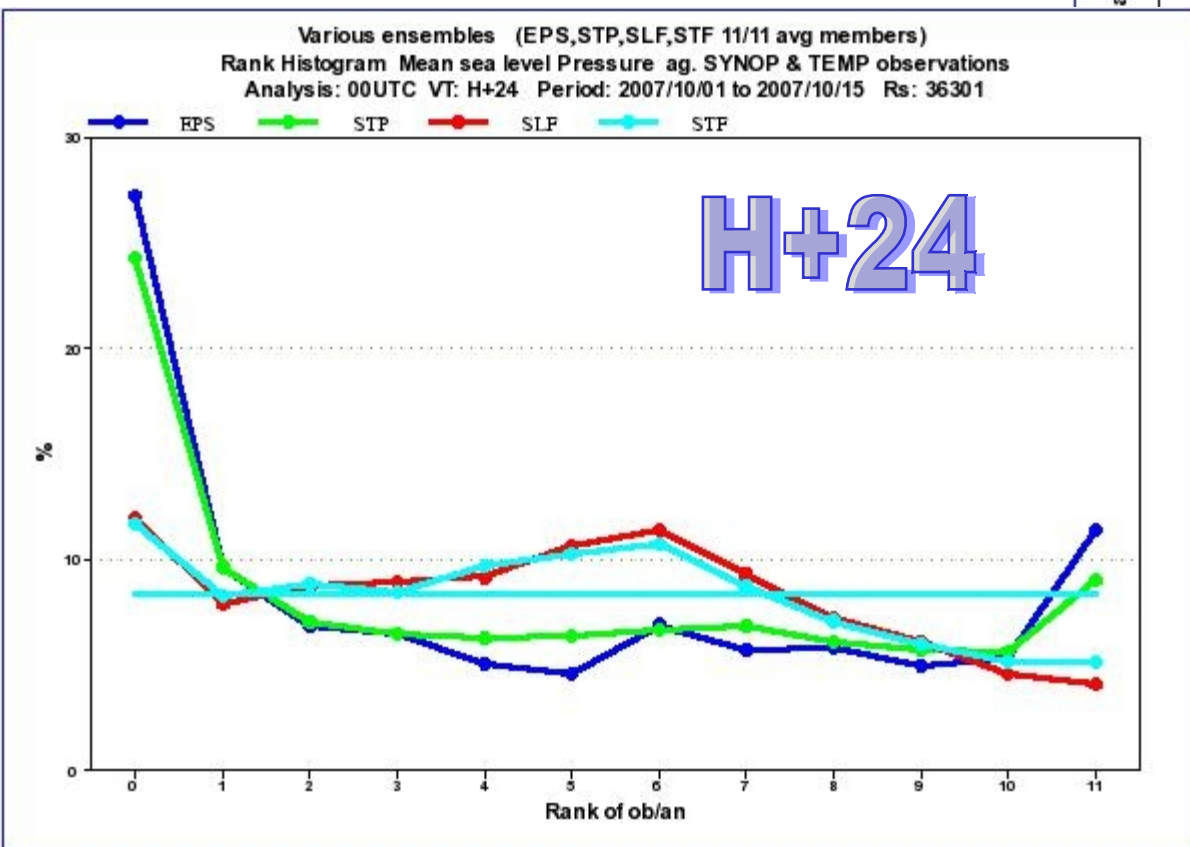

- ☀ Verification exercise using synoptic observations
 - ☀ **Calibration:** with synoptic variables Z500, T500, Pmsl
 - ☀ **Response to binary events:** reliability and resolution of surface variables 10m surface wind and 6h accumulated precipitation
- ☀ Using GLAMEPS verification tool (Carlos Santos) on ecgate.

Conclusions

- ✱ Very crude implementation of SLAF and Stochastic Physics schemes.
- ✱ SLAF based in 48 hours forecast errors.
- ✱ Stochastic Physics scheme like ECMWF one and perturbing Physics tendencies, no individual scheme ones.
- ✱ Short parallel test of 15 days just to test the implementation.
- ✱ No clear statistical significance of results.
- ✱ But ...
 - ✱ SLAF is giving encouraging results and it needs only a single global model forecast for IC's & BC's.
 - ✱ Stochastic Physics doesn't increase spread in the short range (more research needed).
 - ✱ Nice results of just downscaling ECMWF EPS and TEPS for BC's and IC's

Future

- ✱ Improve the implementation of SLAF in GLAMEPS.
- ✱ More experiments on Stochastic Physics to increase spread.
- ✱ Longer parallel test to get more significant results from the verification.
- ✱ 20 members ensemble.
