

***The GLAMEPS project for ensemble
predictions for Europe:
status and verification***

**Alex Deckmyn, Marrakech, 08 May 2012
On behalf of the GLAMEPS team.**

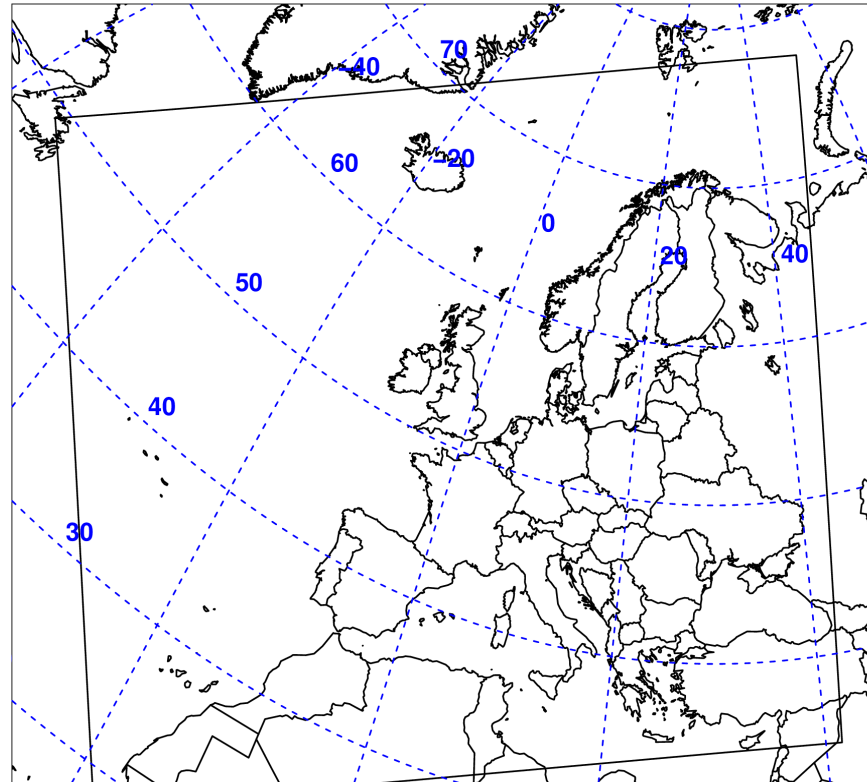

V1

Since end of December 2011

Overview

- Basic structure and setup of v1
- Some examples of results
- Verification
- Conclusions

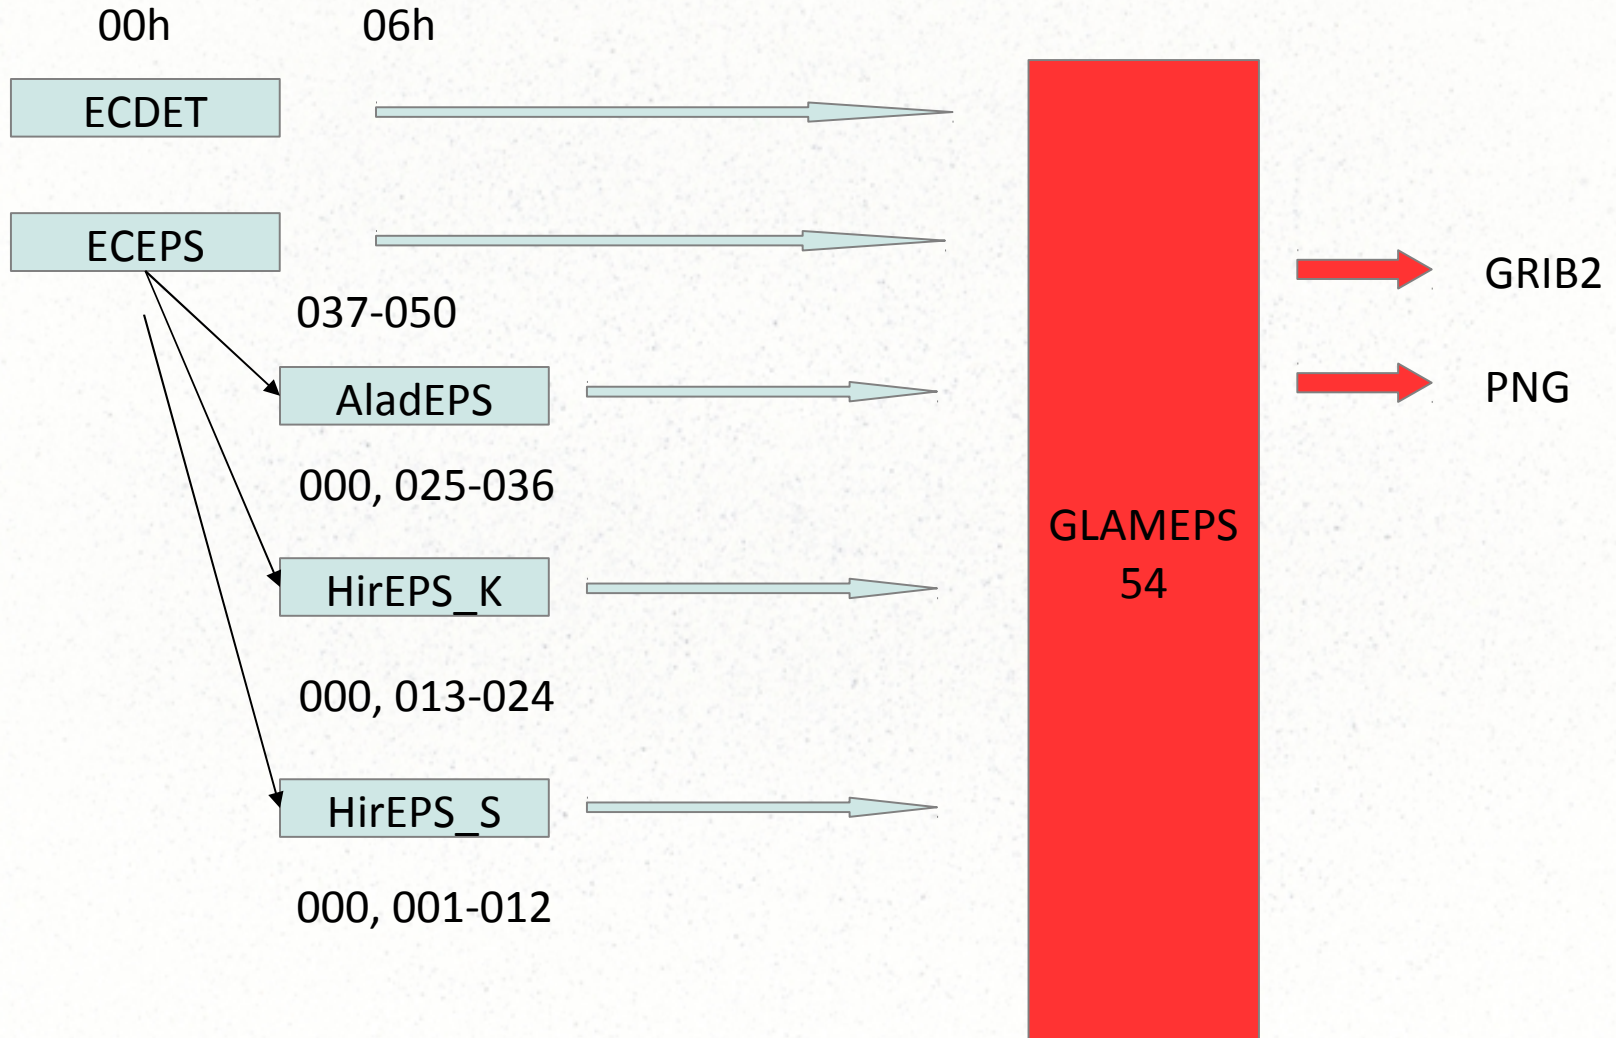

GLAMEPS v1 - v0

GLAMEPS: v0 versus v1

- Slightly larger domain, higher resolution.
- All members of EC-EPS are either used as LBC or directly.
- Aladin members have Surface data assimilation cycles. No longer use Arpège surface analysis.
- Daily runs at 06 and 18 (using IC and LBC from 6h before), 54h runs.

GLAMEPS members:

ALADIN component

- 6h CANARI cycle (conventional data only).
- 3d fields updated at 00h and 12h from EPS.
- all ALADIN members separately.

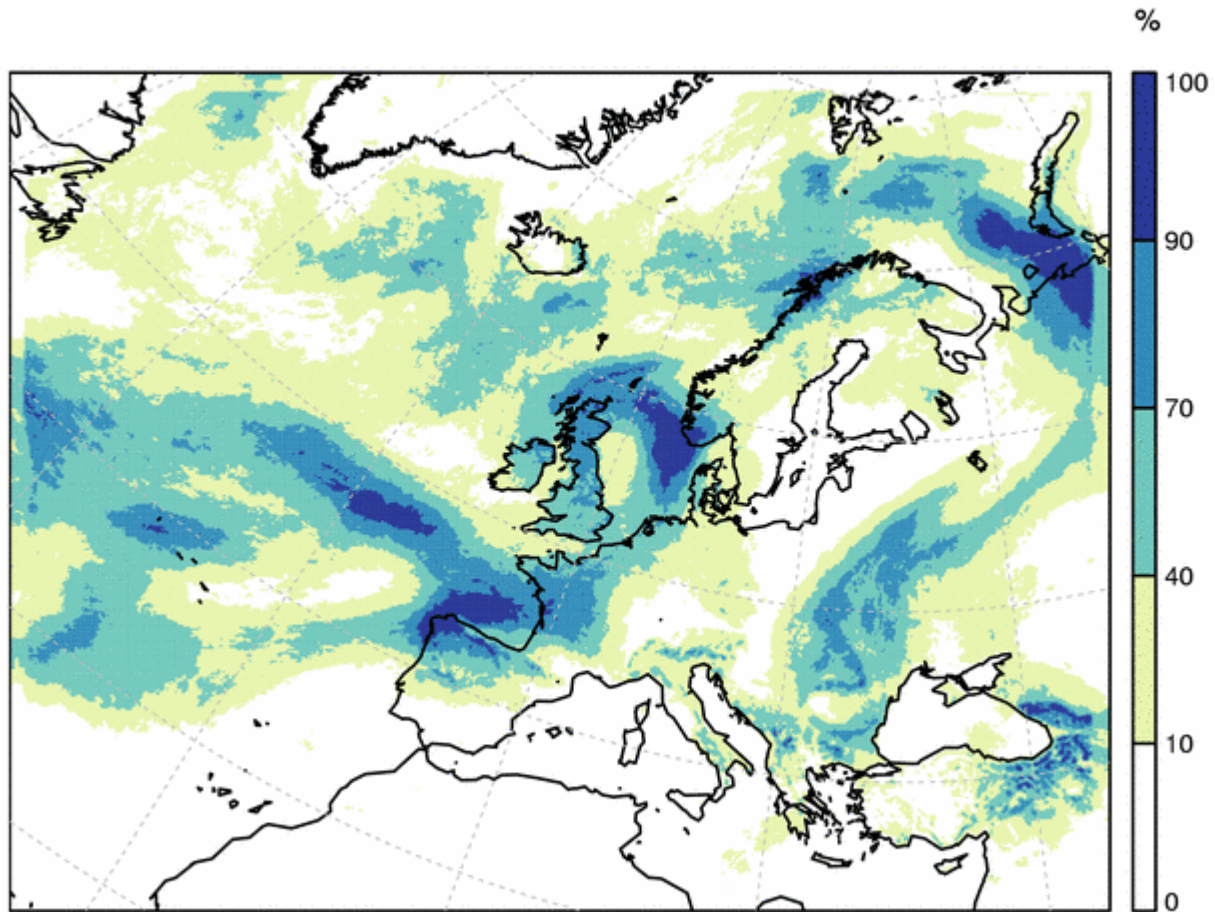

HIRLAM (_S and _K)

- Control members have 3d-Var
- Other members only surface assimilation cycle.
- Stochastic physics

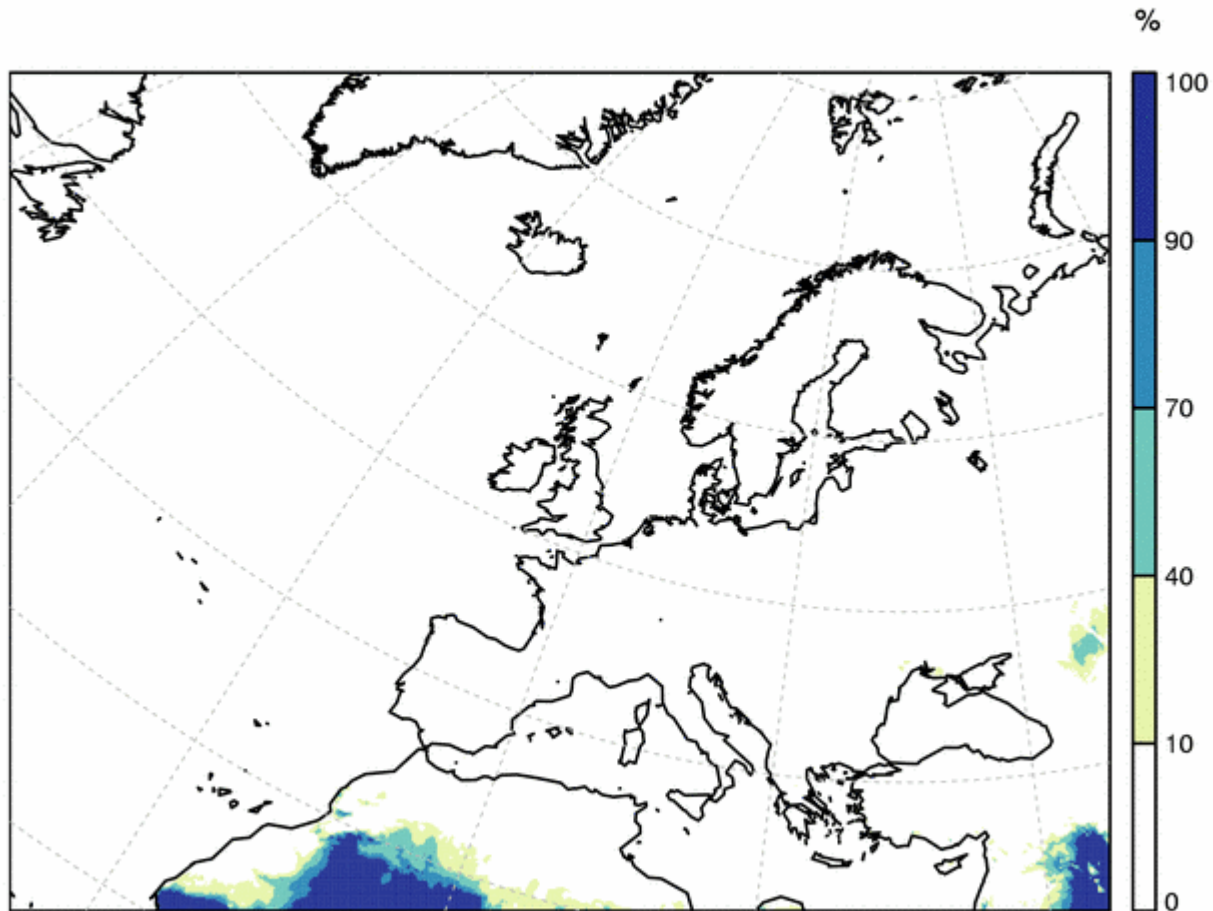

Technical implementation

- SMS suite developed and maintained by Kai Sattler (DMI)
- Running at ECMWF.
- Time Critical status in the pipeline
- Main output products: probability forecasts. Output in GRIB2 and as .png graphs
- Website: glameps.org

GLAMEPS PROD (GI.PROD.m54 54/54 members)
Prob 3h Accumulated Rainfall over 0.1mm (Legend)
Analysis: 2012/05/06 06UTC T+054 VT: 2012/05/08 12UTC

GLAMEPS PROD (GI.PROD.m54 54/54 members)
Prob 2m Surface Temperature over 30°C (Legend)
Analysis: 2012/05/06 06UTC T+054 VT: 2012/05/08 12UTC

Cold start

- The CANARI surface assimilation in ALADIN has a long spin-up. Cold starts must be avoided.
- If GLAMEPS is down, a single DA cycle will be continued (if at all possible).

Verification

- V1 verification had to be re-written from scratch.
- Decision was made to use R, which is already used for the production of output products.
- 3 stage system:
 - Save a table output data for a fixed list of co-ordinates during main suite. ARCHIVE! (for verification & calibration)
 - Combine with observations & Produce verification statistics.
 - Make graphs.
- Very early results: not fully analysed yet...

Conclusions

- v1 is in operation since beginning of 2012.
- First verification results (T2m) look promising, but further work is necessary.

Thank you!
