Use of radar observations in Harmonie: Status and plans

Martin S. Grønsleth, PhD,
R&D, Remote sensing, met.no
ASM2010, 2010-04-13

Outline

1 Plans at met.no

- Radar winds
- Reflectivity, pseudo observations ala France

2 Challenges

3 CONRAD

4 Current status

Outline

1 Plans at met.no

- Radar winds
- Reflectivity, pseudo observations ala France

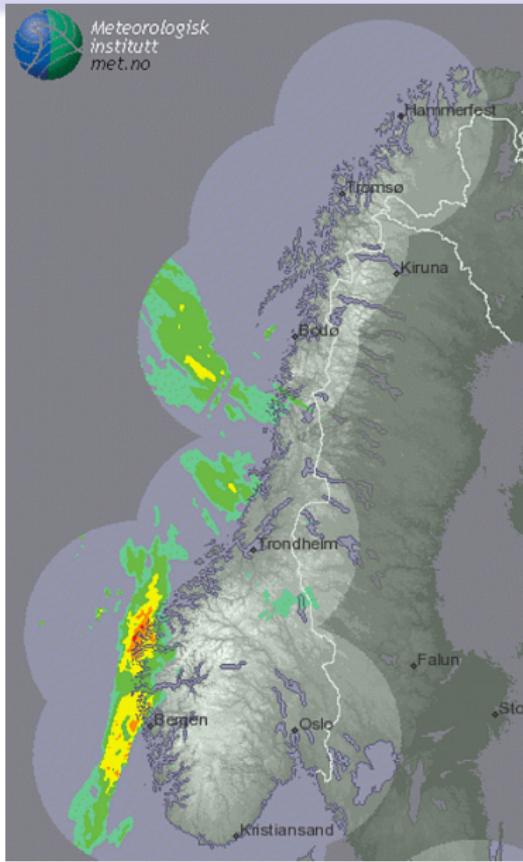

2 Challenges

3 CONRAD

4 Current status

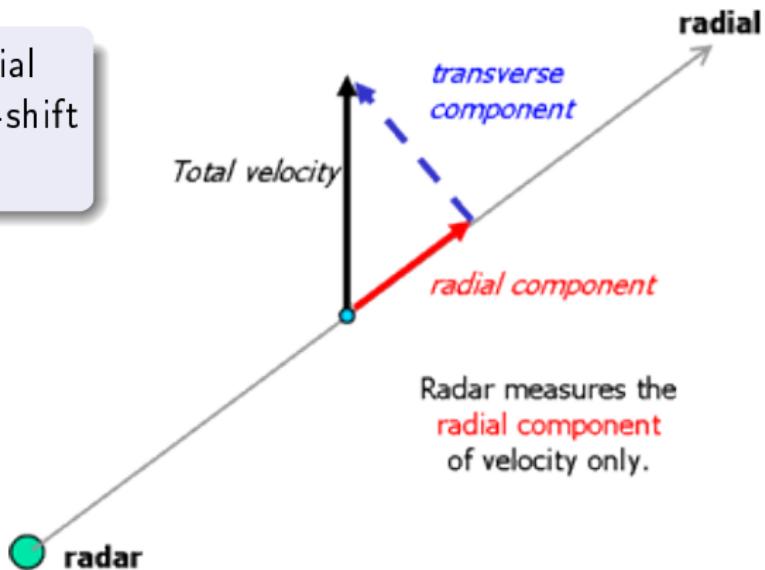

Plans at met.no

- Assimilate
 - reflectivities (precip.)
 - radial windsfrom radar observations.
- Harmonie (NORWAY_4KM)
- Adopt methods developed by Météo-France (AROME)

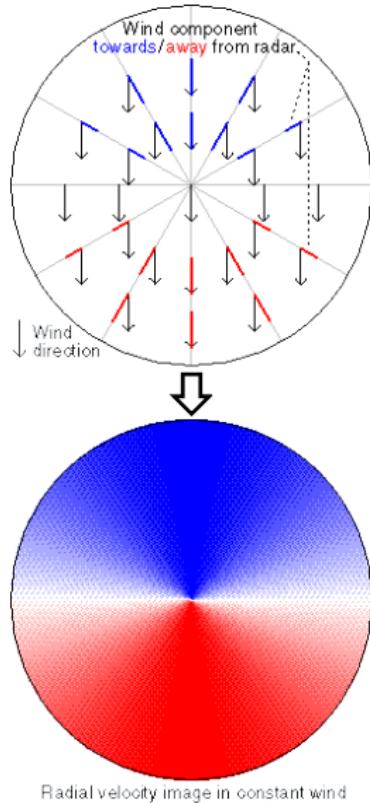

Radar wind: Principles

- Particles with radial velocity \Rightarrow phase-shift
- “Doppler radars”

Radar wind: Principles

- Particles with radial velocity \Rightarrow phase-shift
- “Doppler radars”

Radar wind: Impact study

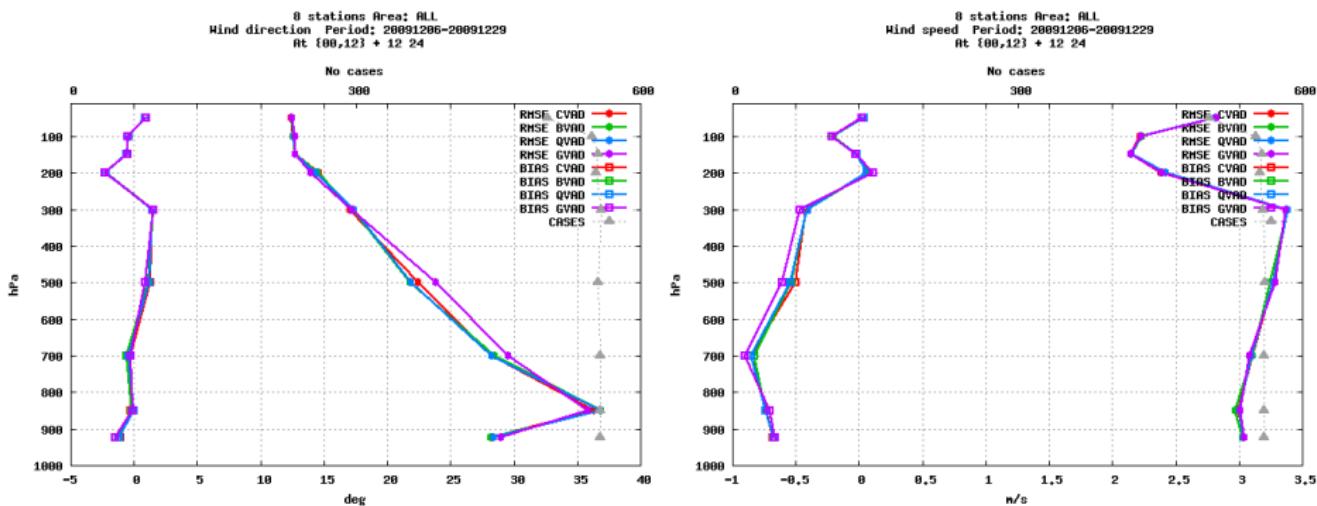

Wind profiles from radar observations

- Velocity Azimuth Display (VAD)
- Velocity Volume Processing (VVP)
- Weather Radar Wind Profiles (**WRWP**)

Frank T. Tveter and Roger Randriamampianina:
Impact study of Norwegian wind profiles in Harmonie

IMPACT

WHAT IS THE IMPACT OF NORWEGIAN WRWP **WITH QC** ON HARMONIE?

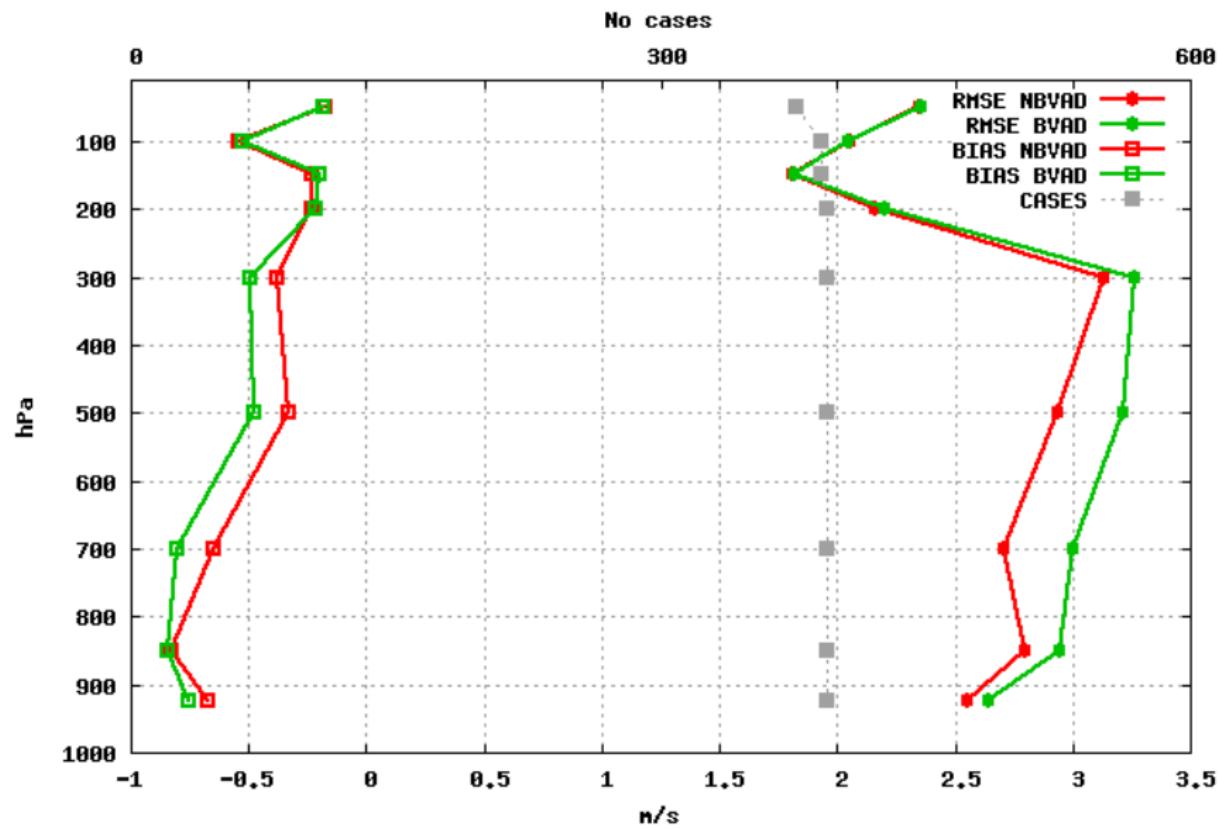

CVAD = no Norwegian WRWP, **QVAD** = QC Norwegian WRWP,

BVAD = QC+BC Norwegian WRWP, **GVAD** = All Norwegian WRWP

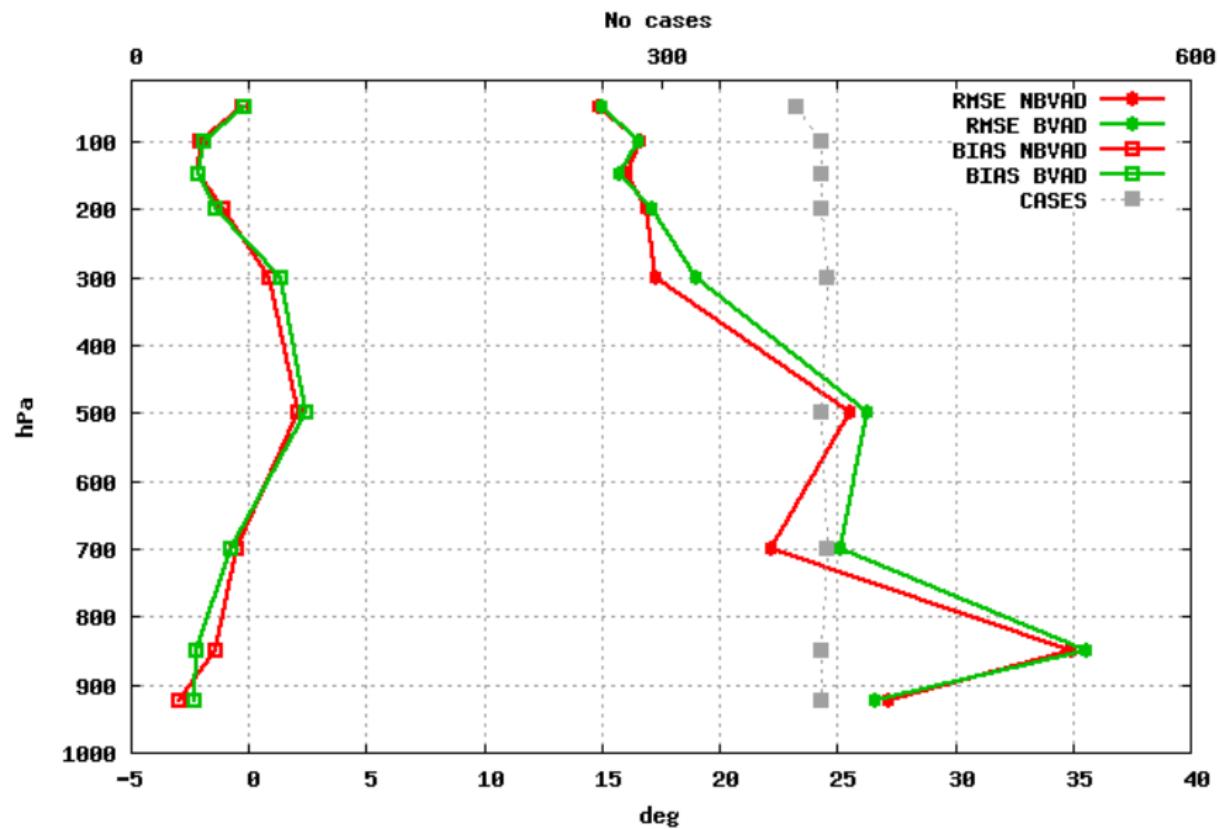

Radar wind: Impact study

8 stations Area: ALL
Wind speed Period: 20091201-20091210
At {00,06,12,18} + 06 12 24

Radar wind: Impact study

8 stations Area: ALL
Wind direction Period: 20091201-20091210
At {00,06,12,18} + 06 12 24

File conversion

*Work in progress

Outline

① Plans at met.no

- Radar winds
- Reflectivity, pseudo observations ala France

② Challenges

③ CONRAD

④ Current status

- Local radar reflectivity data is successfully converted
- Radial winds is not yet implemented
- Quality flagging is not yet implemented

Raw reflectivity data accepted by BATOR \Rightarrow ODB
Can compare simulated and observed reflectivity

First attempt on visualizing radar obs. from ODB...

Using Metview

Preview: geopoints

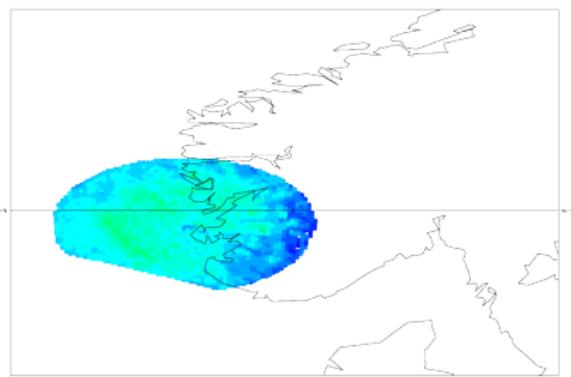

Figure: Observed reflectivity

Preview: geopoints

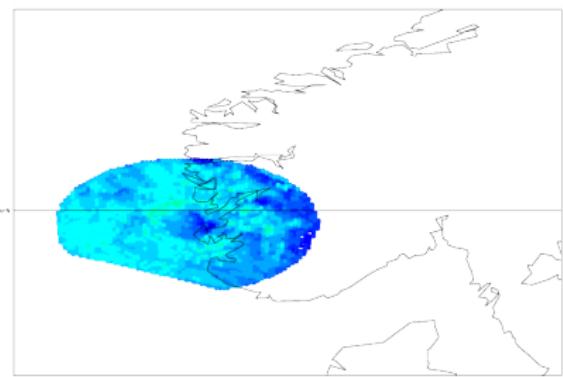

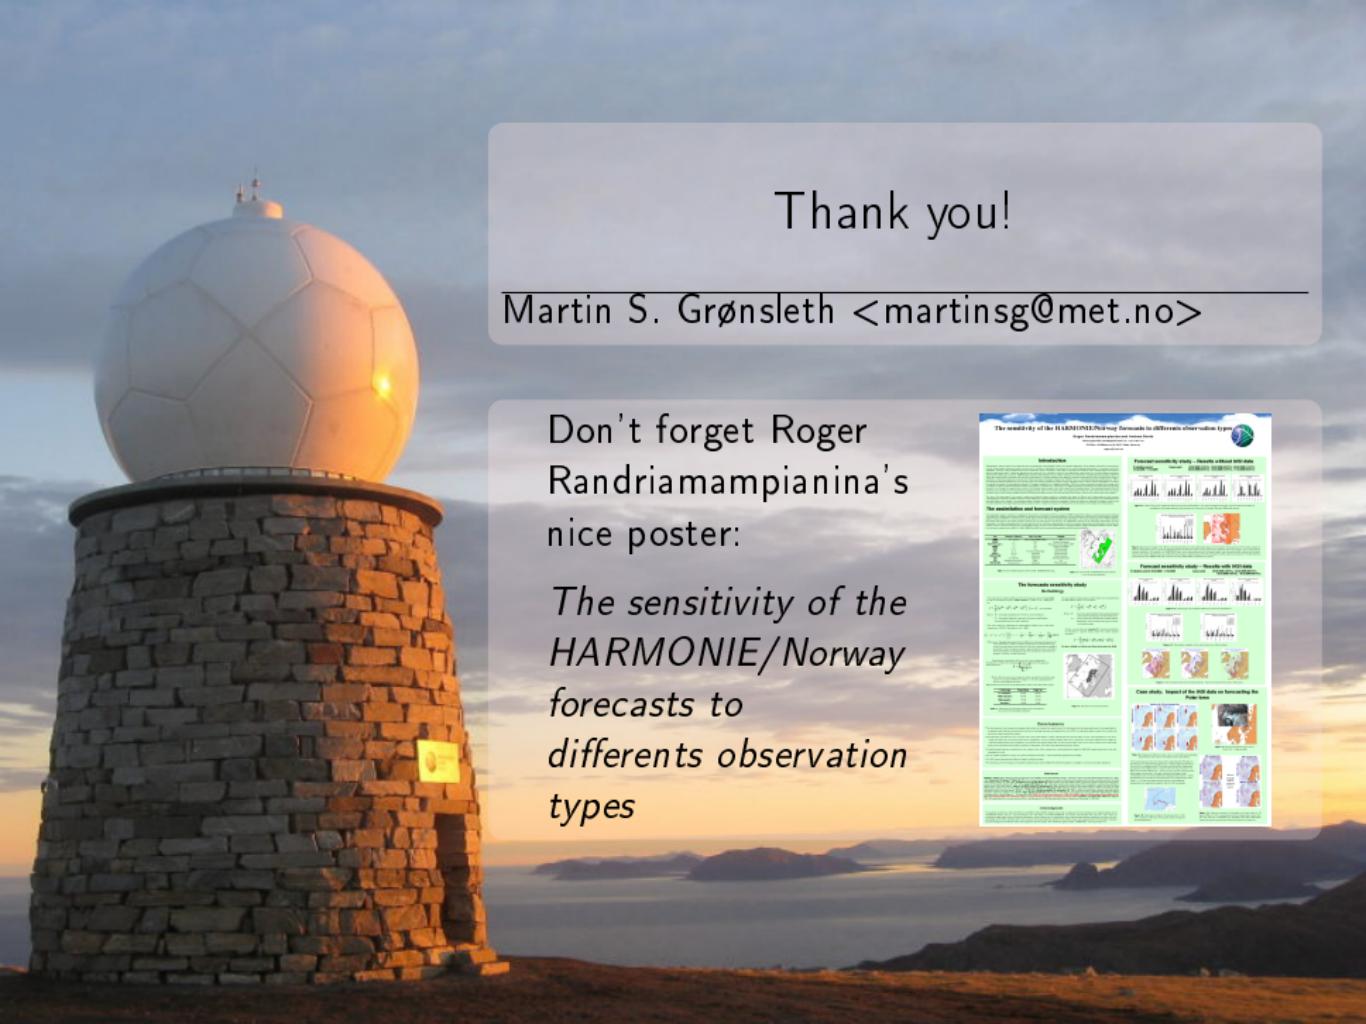

Figure: Simulated reflectivity

A photograph of a large white radome mounted on a tall, cylindrical stone tower. The sun is setting behind the tower, casting a warm orange glow on its side and the surrounding landscape. In the background, there are hills and a body of water under a cloudy sky.

Thank you!

Martin S. Grønsleth <martinsg@met.no>

Don't forget Roger Randriamampianina's nice poster:

The sensitivity of the HARMONIE/Norway forecasts to different observation types
