

Operational support/switches

- **missing communication and feedbacks**
 - from Partners after local validations and tests on experiences/encountered problems
 - from TIs how the reported problems were treated
 - missing scientific documentation
 - missing discipline
- **proposals**
 - *files for testing (available well in advance)*
 - *common format of oper messages (standard header, keywords)*
 - *default answer (in case of no answer)*
 - *common tools for validations to be developed and used*
 - *commonly stored local operational namelists*
 - *internet forum (wiki)*

Requirements to MF

- real-time access to LBC from e-suite for everybody (no need to send, delage OK)
- Switches preferably on Tuesdays (but internal MF constraints exists)
- Simultaneous switch for cycled applications in case the cold-start is needed

Role of LTMs

- Role of LTMs unclear to LTMs; mainly difference with correspondents
- Authority to distribute tasks and monitor/report their fulfillments; check conflicts between Programme requirements and local needs
- How the reporting is done? Ex. how the outcome/requests from BA meeting are reported to GA?
