

State of tools

by J-D Gril (2008-Bruxelles)

- Pinuts :
 - Now the version 3.2 is into *uti* directory of the model
 - An executable can be created from *GMKPACK* with the key :
-p pinuts
 - Remember to make « links » (frodo, edf, ecto, makdo, subdo, ...) to this binary to use these tools
 - For feed back :
 - Are you satisfied by the last tools, shown in Oslo (makdo, subdo)?
 - Have you some new wishes

- Future plans :
 - Two new graphical tools : the first one, geoview with ncar/F90, the other one, domview with Tcl/Tk are currently being developed to visualize and to create domains (HMI for makdo)
 - I thinking of a way to develop future tools with PYTHON, therefore if someone has already got these kind of tools in this language, please let me know (except if they are referenced on the Aladin web site)
