

HIRLAM work with ALADIN in 2005

- Initial training
- Setup at ECMWF and learning the systems (2004)
- Experimentation at ECMWF
- Interface HIRLAM files – ALADIN coupling files
- Interface HIRLAM physics
- Set up daily runs at DMI, SMHI – H and NH ALADIN
- Diagnostics and verification
- Climate generation software available at ECMWF –

Work distribution

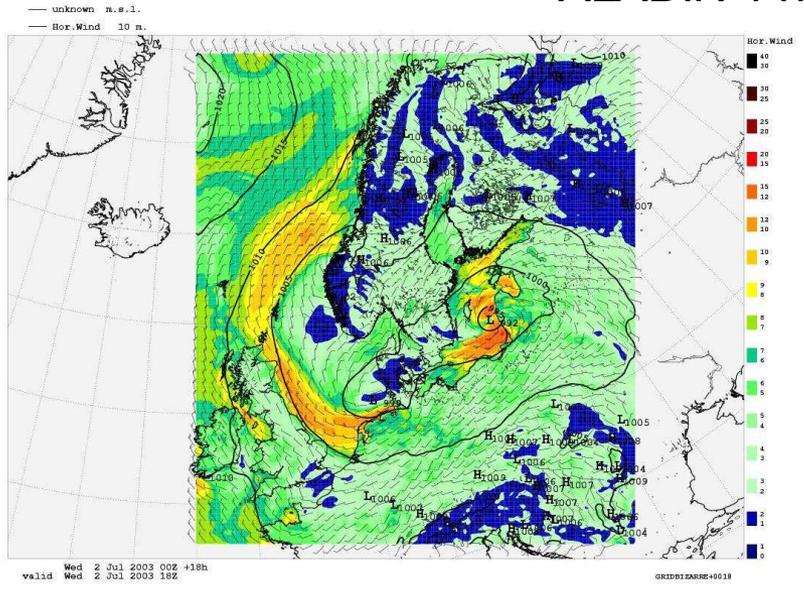

Achievements on work with ALADIN mainly 2nd half of 2004

- Learning the model and the system
- Rotated-tilted Mercator projection (PB)
- Reference set up at ECMWF
 - Cy 28
 - Cy 29t2

Main work by MF and many interactions with HIRLAM

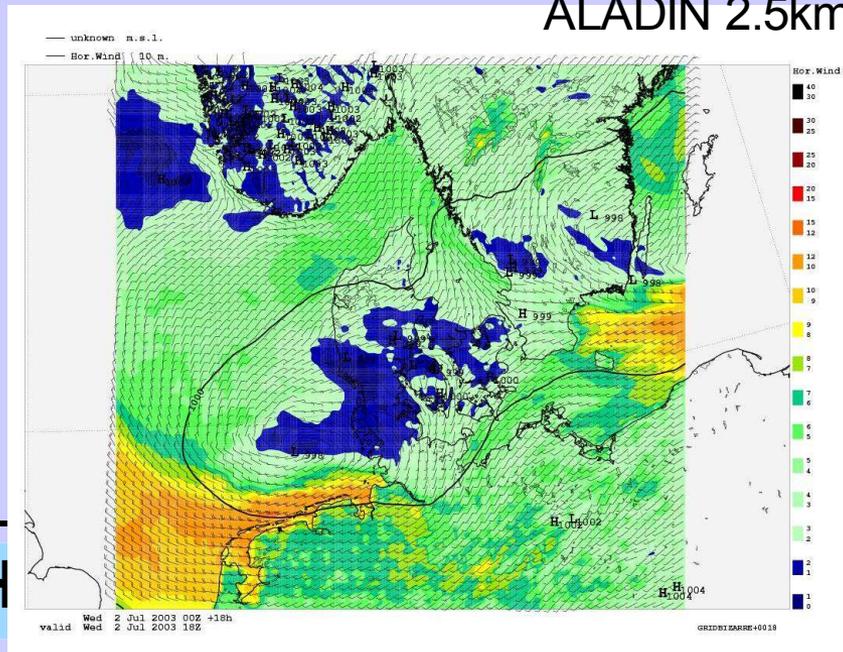

- Set up of double nested system
 - Around Scandinavia 11 km, two 2.5 km areas
 - Data from ARPEGE and climate data from MF
 - Experience, tests and comparisons July 2003

ALADIN 11km

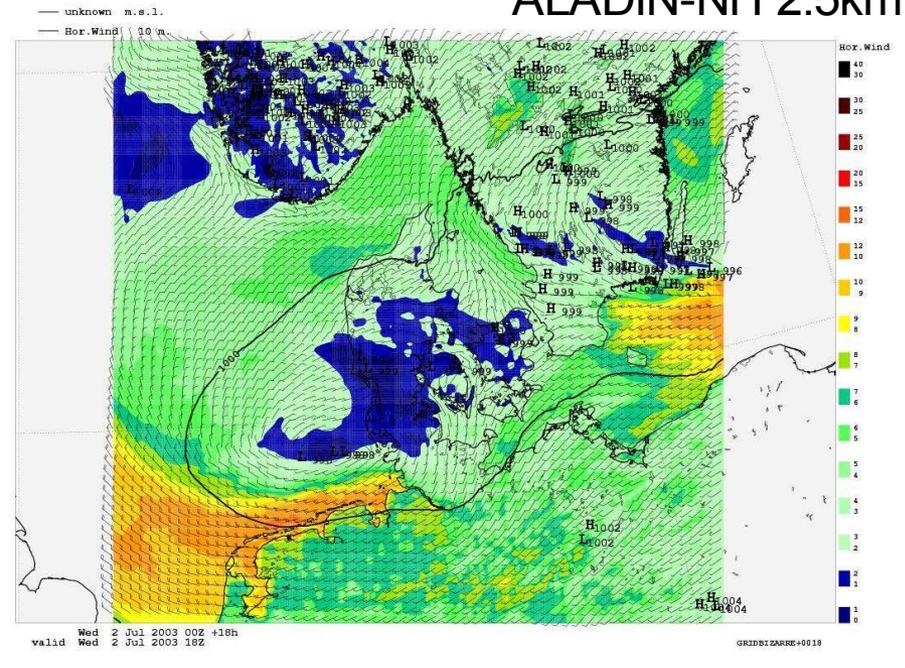

Aladin forecast 2nd of July 2003 18 UTC

ALADIN 2.5km

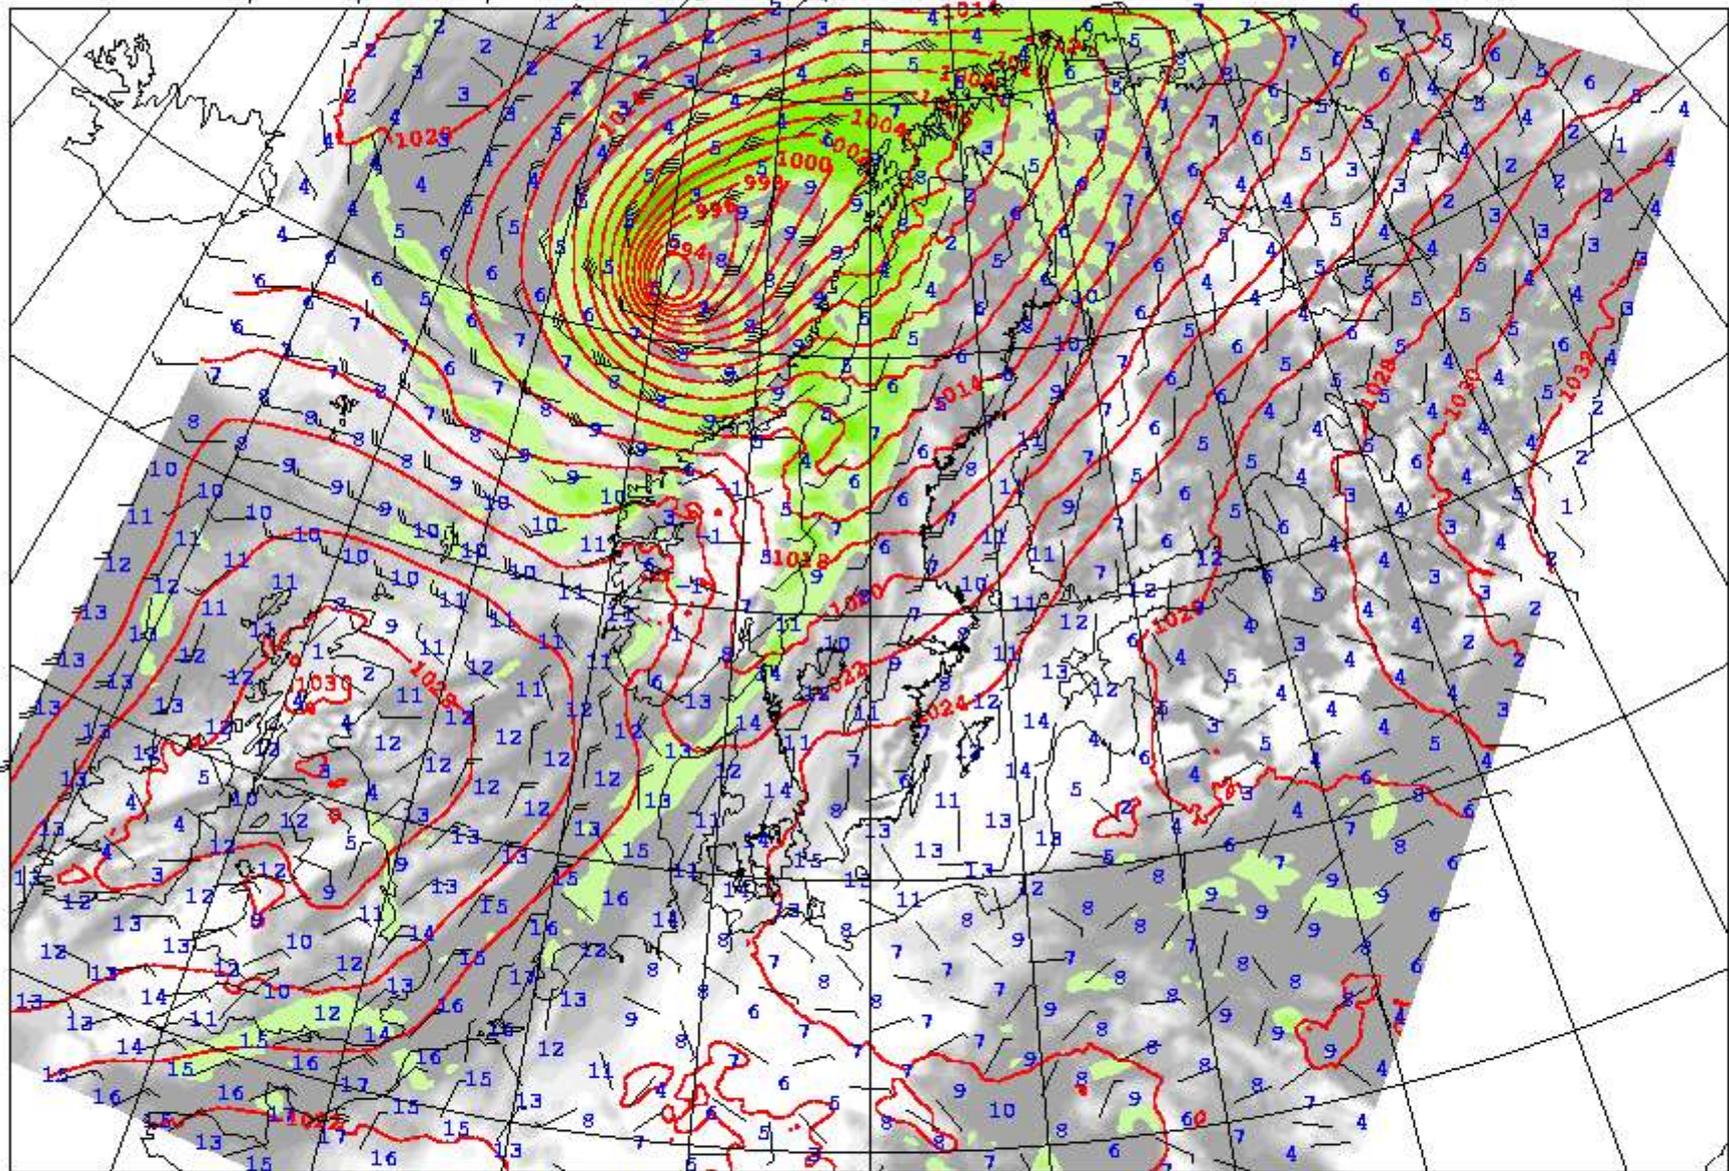

ALADIN-NH 2.5km

Achievements on work with ALADIN II

- Interface from HIRLAM files
 - Transform gp data to spectral to ALADIN files
 - Initial files
 - Coupling files
- Adapted HIRLAM plotting package and verifications to ALADIN files and geometry
- Set up reference at HIRLAM institutes
 - DMI, SMHI
- Test periods in April and during summer
- Daily runs from September
 - 11 km
 - 2.5 km areas (1 DMI, 2 SMHI)

Norway

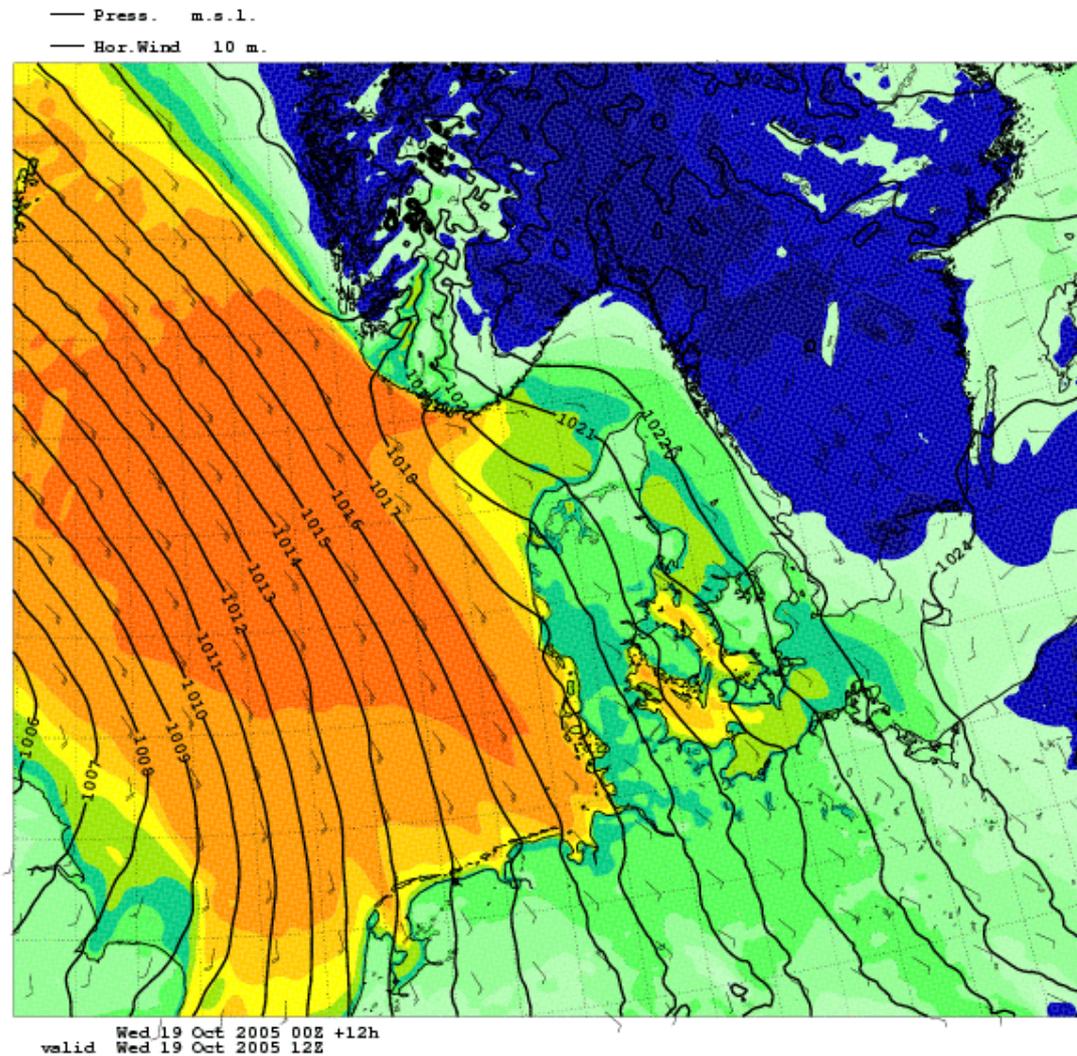

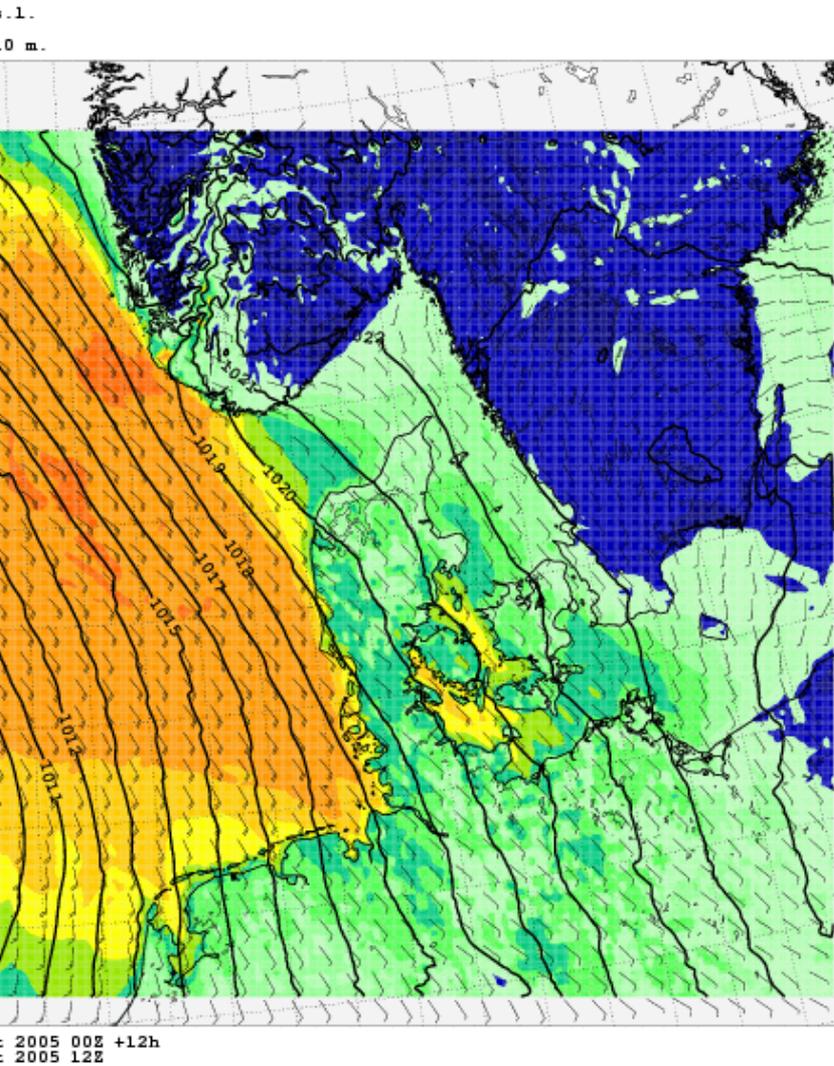

DMI Scandinavian area 11 km

DMI Danish area

Aladin 2.5

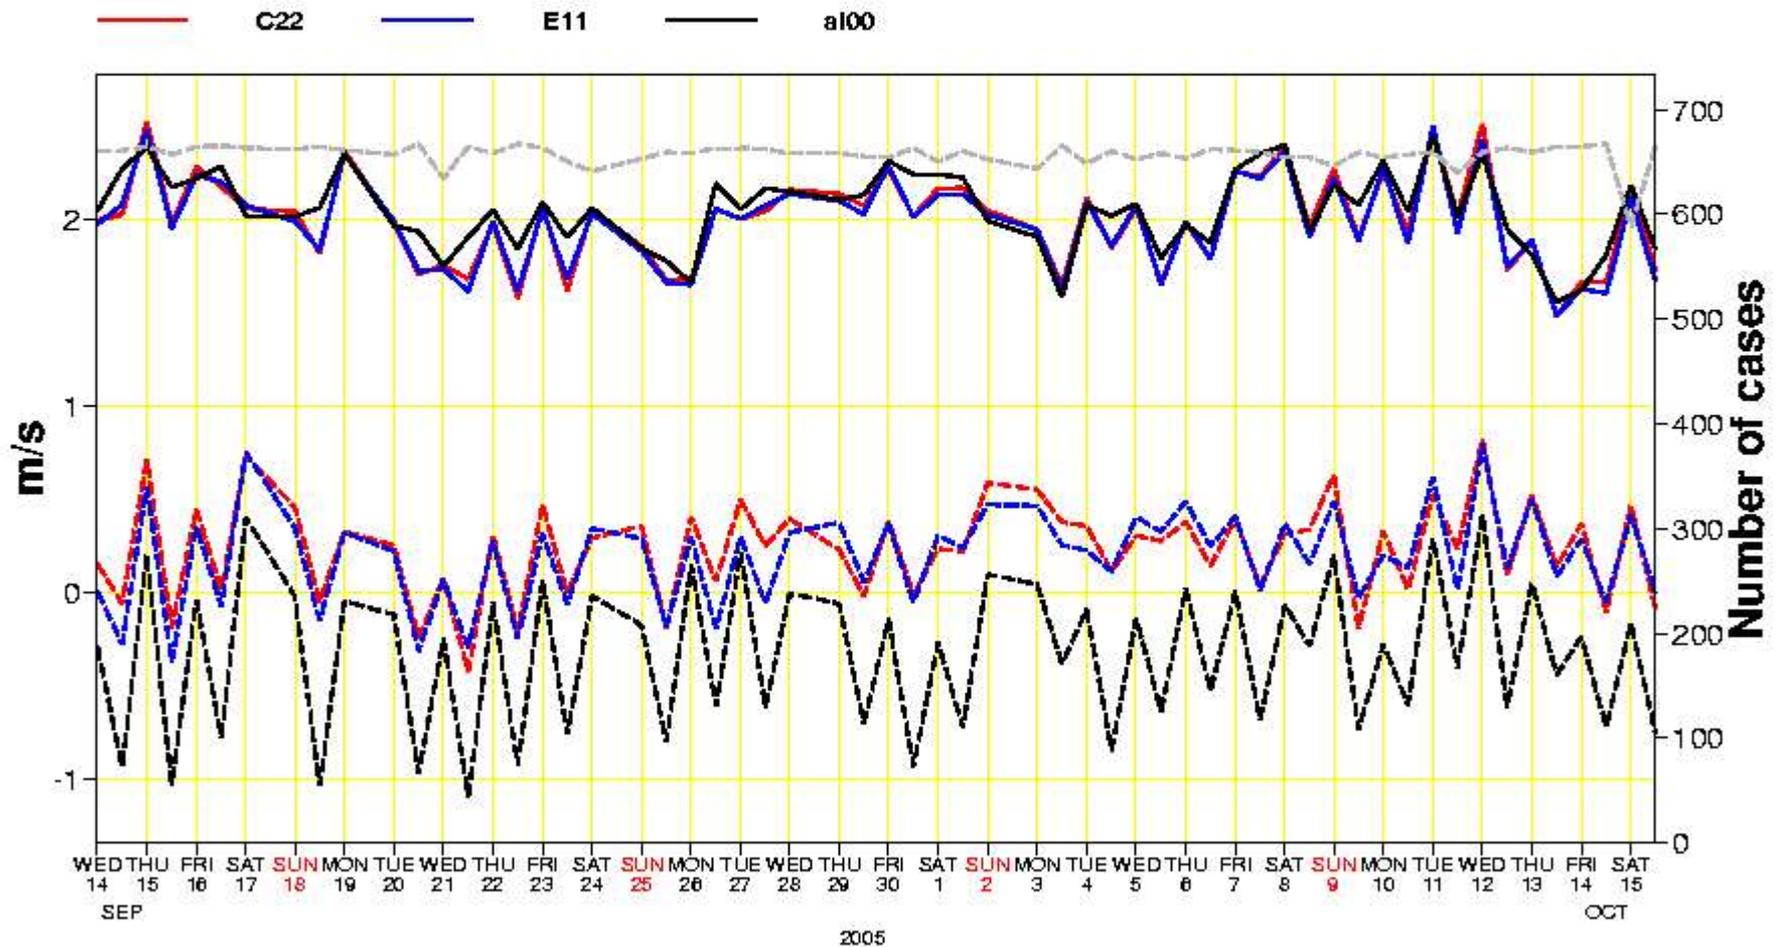

Hirlam 5

Achievements on work with ALADIN III

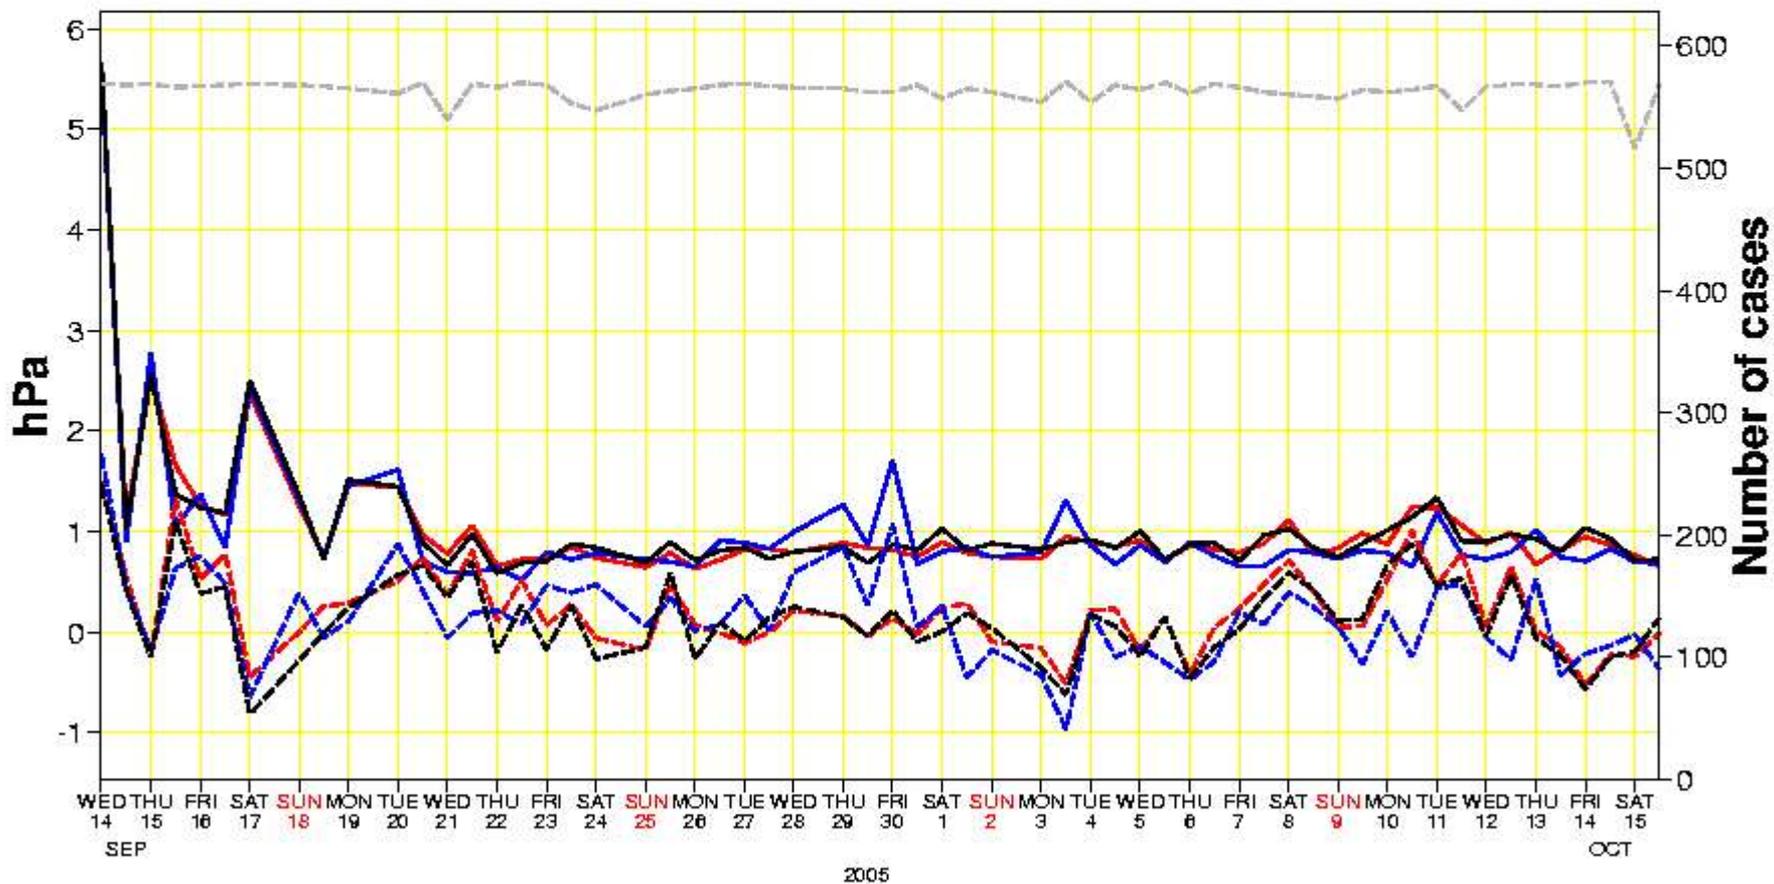

- Technical performance
 - Scaling (IBM, NEC and cluster)
- Diagnostics of meteorological performance
 - Solving bugs mainly in own setup – HIRLAM files
 - Preliminary verifications confirm stability and quality
- Interfacing HIRLAM physics
 - Convection, condensation, turbulence and radiation (not surface due to externalisation)
 - F90 and IFS conventions
 - ALADIN interfaces (fluxes)
 - New reference equations and pseudo-fluxes

Use of HIRLAM physics

Ten persons from the HIRLAM community started to study the the IFS/ALADIN model system. Seven persons remained active contributors through the project period. The names are

Ulf Andrae [SMHI]

(Work: study of IFS/ALADIN, technical work, boundary forcing, Climate generation)

Sami Niemela [FMI]

(Work: study of IFS/ALADIN, recoding of radiation scheme, physics test)

Isabel Martinez [INM]

(Work: study of IFS/ALADIN, boundary forcing)

Ana Belen Morata [INM]

(Work: study of IFS/ALADIN, boundary forcing)

Bjarne S. Andersen [DMI]

(Work: study of IFS/ALADIN, technical work)

Karina Lindberg [DMI]

(Work: study of IFS/ALADIN , coordinate transformations, technical work.

Bent H. Sass (coordinatorr of mesoscale activities), [DMI]

(Work: Study of IFS/ALADIN, physics interface, HIRLAM physics recoding)

The following meetings are directly connected to the meso-scale project with participation of people from the HIRALD group:

- 15-19 March 2004:
Mesoscale course at Météo France (Sass, 2004b)
- 10-14 July 2004:
Working Meeting at DMI (first HIRALD setup at ECMWF established)
- 22-26 November 2004:
Aladin workshop on physics interface, coding and numerical issues related to ALADIN/ALARO/AROME (in Prague).
- 14-17 February 2005:
Working meeting at DMI (Evolution of HIRALD setup , planning of future activities)
- 5-9 June 2005: ALADIN workshop in Bratislava including detailed planning activity with key persons of ALADIN and Météo-France.
- 31 October -1 November 2005: Working visit of Ulf Andrae to DMI.
- 14-18 November 2005:
Coding principles of IFS/ALADIN seen in HIRLAM collaboration perspective, and data-assimilation planning meeting (in Budapest).
- 21-25 November 2005:
AROME course in Romania.
- 12-14 December 2005:
Physics planning meeting for collaboration between HIRLAM and ALADIN/Meteo-France (in Oslo)

Conclusions

- Active work to
 - Learn
 - Set up
 - Run and get experience with ALADIN
- Worked on interface from HIRLAM
 - And tools for diagnostics and plotting
- Worked on interfacing HIRLAM physics
- Computational studies
- Planning for future and common research
