

Data assimilation activities@SHMU

Mária Derková

with contributions from
M. Imrišek, M. Neštiak, A. Simon

RC LACE DA working days, Prague, 18-20/09/2019

Outline

- Operational and experimental setups of ALADIN systems
- Checks on CANARI settings
- GNSS ZTD data assimilation
- Summary and future plans

ALADIN/SHMU systems

<i>CMC</i>	ALARO/SHMU
<i>status</i>	operational
<i>code version</i>	CY40T1bf07_export
<i>physics</i>	ALARO-1vB
<i>dx</i>	4.5 km
<i>pts</i>	625 x 576
<i>vertical levels</i>	63
<i>tstep</i>	180 s
<i>forecast ranges</i>	78/72/72/60 (a' 1h)
<i>coupling model</i>	ARPEGE (long- & short cut off), 3h
<i>assimilation</i>	upper air spectral blending by DFI & CANARI surface assimilation
<i>initialization</i>	no initialization
<i>HPC</i>	IBM Flex System p460, linux

ALADIN/SHMU systems

<i>CMC</i>	ALARO/SHMU	ALARO/2km	AROME/2km
<i>status</i>	operational	experimental	
<i>code version</i>	CY40T1bf07_export		
<i>physics</i>	ALARO-1vB		
<i>dx</i>	4.5 km	2.0 km	
<i>pts</i>	625 x 576	512 x 384	
<i>vertical levels</i>	63	73	
<i>tstep</i>	180 s		
<i>forecast ranges</i>	78/72/72/60 (a' 1h)	+78h at 00UTC/+72h at 12UTC (a' 1h)	
<i>coupling model</i>	ARPEGE (long- & short cut off), 3h	ALARO-1vB (4.5 km), 1h	
<i>assimilation</i>	upper air spectral blending by DFI & CANARI surface assimilation	downscaling	
<i>initialization</i>	no initialization		
<i>HPC</i>	IBM Flex System p460, linux	IBM p755 running with IBM Flex System p460, linux	

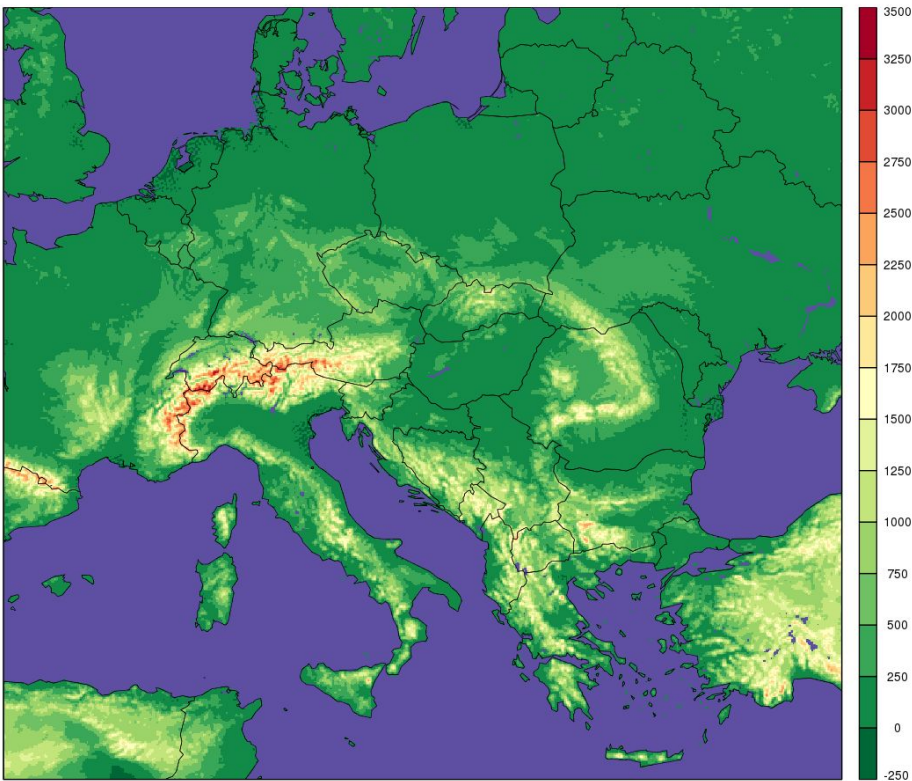

ALADIN/SHMU systems

<i>CMC</i>	ALARO/SHMU	ALARO/2km	AROME/2km
<i>status</i>	operational	experimental	
<i>code version</i>	CY40T1bf07_export	CY43T2_pre.bf10	CY40T1bf07_export
<i>physics</i>	ALARO-1vB	ALARO-1vB	AROME-FRANCE
<i>dx</i>	4.5 km	2.0 km	
<i>pts</i>	625 x 576	512 x 384	
<i>vertical levels</i>	63	73	
<i>tstep</i>	180 s	120 s	144 s
<i>forecast ranges</i>	78/72/72/60 (a' 1h)	+78h at 00UTC/+72h at 12UTC (a' 1h)	
<i>coupling model</i>	ARPEGE (long- & short cut off), 3h	ALARO-1vB (4.5 km), 1h	
<i>assimilation</i>	upper air spectral blending by DFI & CANARI surface assimilation	downscaling	
<i>initialization</i>	no initialization	DFI	no initialization
<i>HPC</i>	IBM Flex System p460, linux	IBM p755 running with IBM Flex System p460, linux	

ALADIN/SHMU systems

<i>CMC</i>	ALARO/SHMU	ALARO/2km	AROME/2km
<i>status</i>	operational	experimental	
<i>code version</i>	CY40T1bf07_export	CY43T2_pre.bf10	CY40T1bf07_export
<i>physics</i>	ALARO-1vB	ALARO-1vB	AROME-FRANCE
<i>dx</i>	4.5 km	2.0 km	
<i>pts</i>	625 x 576	512 x 384	
<i>vertical levels</i>	63	73	
<i>tstep</i>	180 s	120 s	144 s
<i>forecast ranges</i>	78/72/72/60 (a' 1h)	+78h at 00UTC/+72h at 12UTC (a' 1h)	
<i>coupling model</i>	ARPEGE (long- & short cut off), 3h	ALARO-1vB (4.5 km), 1h	
<i>assimilation</i>	upper air spectral blending by DFI & CANARI surface assimilation	downscaling	
<i>initialization</i>	no initialization	DFI	no initialization
<i>HPC</i>	IBM Flex System p460, linux	IBM p755 running with IBM Flex System p460, linux	

ALARO/SHMU operational domain

ALARO 4.5 km/L63

Operational & HR models domains

ALARO 4.5 km/L63

ALARO/AROME 2.0 km/L73

Verification of SHMU models (vert)

7 stations Selection: ALL
Temperature Period: 201907
Statistics at 00 UTC Used {00,12} + 12 24 36 48

ALARO/SHMU
4.5 km/L63

ALARO/SHMU
2 km/L73

AROME/SHMU
2 km/L73

ALARO/CHMI
2.3 km/L87

July 2019
temperature

Suboptimal distribution of vertical levels of SHMU 2 km models near model top (impact on assimilation of AMDAR obs?)

Verification of SHMU models (surf)

Selection: ALL using 364 stations
 Rh2m Period: 201907
 Hours: {123}

ALARO/SHMU
 4.5 km/L63

ALARO/SHMU
 2 km/L73

AROME/SHMU
 2 km/L73

ALARO/CHMI
 2.3 km/L87

July 2019
 RH2m 12 UTC

Arome INIT bad scores for moist parameters at 12 UTC NT - corr by assim?

CAPE pb => checks on CANARI settings

Motivation: forecasters' complaints about unrealistic CAPE values - case 13/06/2019 12 UTC (+12 h forecast) - too much moisture in ALADIN

Courtesy of Miro Singer

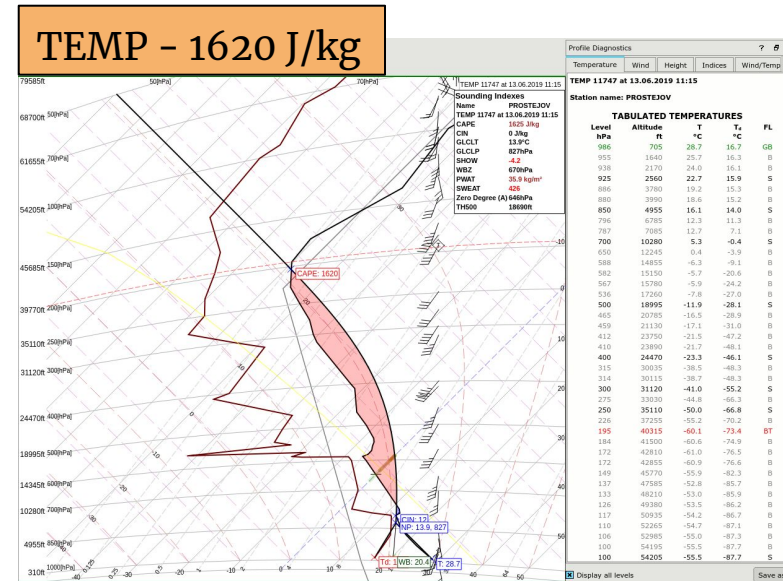

CAPE pb => checks on CANARI settings

Motivation: forecasters' complaints about unrealistic CAPE values - case 13/06/2019 12 UTC (+12 h forecast) - too much moisture in ALADIN

- see Prostějov sounding & forecast

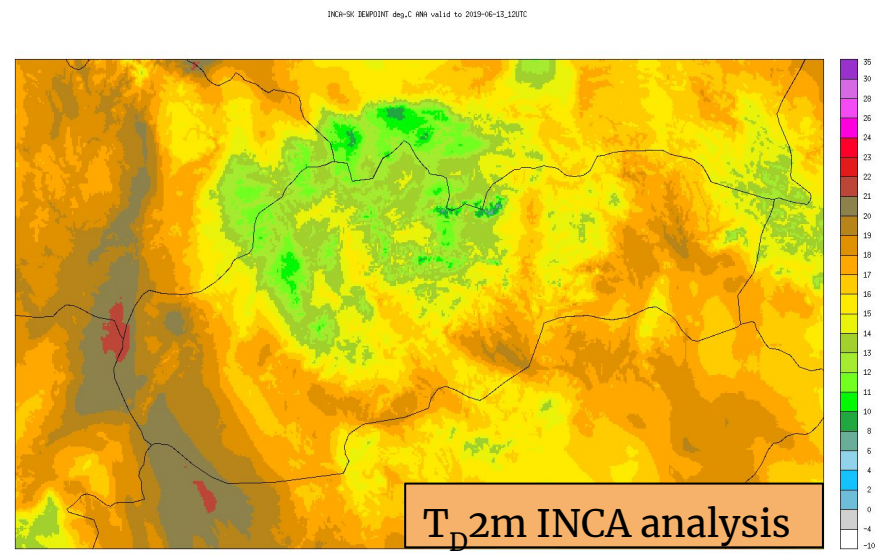

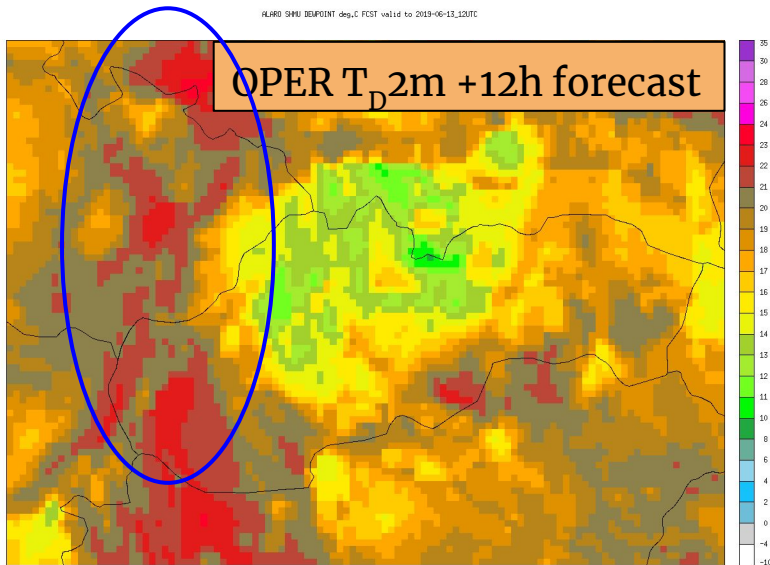

Courtesy of Miro Singer

ALADIN (4.5 km): CAPE [J/kg] + Wind Shear 500 hPa vs 10 m [m/s]
Base: 13.06.2019 00:00, Valid: 13.06.2019 12:00 UTC

Checks on CANARI settings

- One of the potential source of problems = unrealistic values of near surface moisture

Checks on CANARI settings

- One of the potential source of problems = unrealistic values of near surface moisture
- Bug in missing **LXSOIL=.T.** in the blending forecast to have evaporation fluxes in guess (forgotten in switch to ALARO-1vB)
- Testing LDIRCLSMOD=.TRUE.
 - More tests planned (check on wind treatment)
- Adding all available LACE AWS
 - Neutral -> slightly positive impact
- Plan: MESCAN

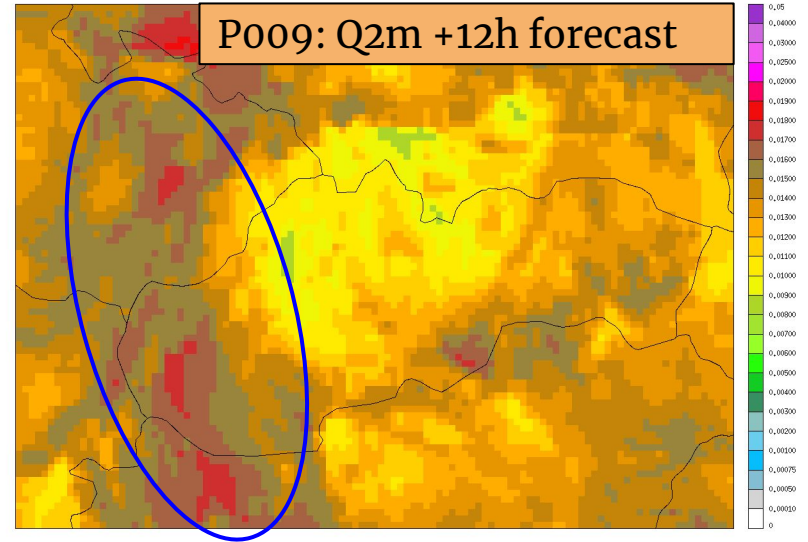

Q2m on 13/06/2019 12 UTC (+12 h F)

Scores with all local AWS (+ bug corr)

3 days assim => 8 days (13-21/06/2019), 00 forecasts only.

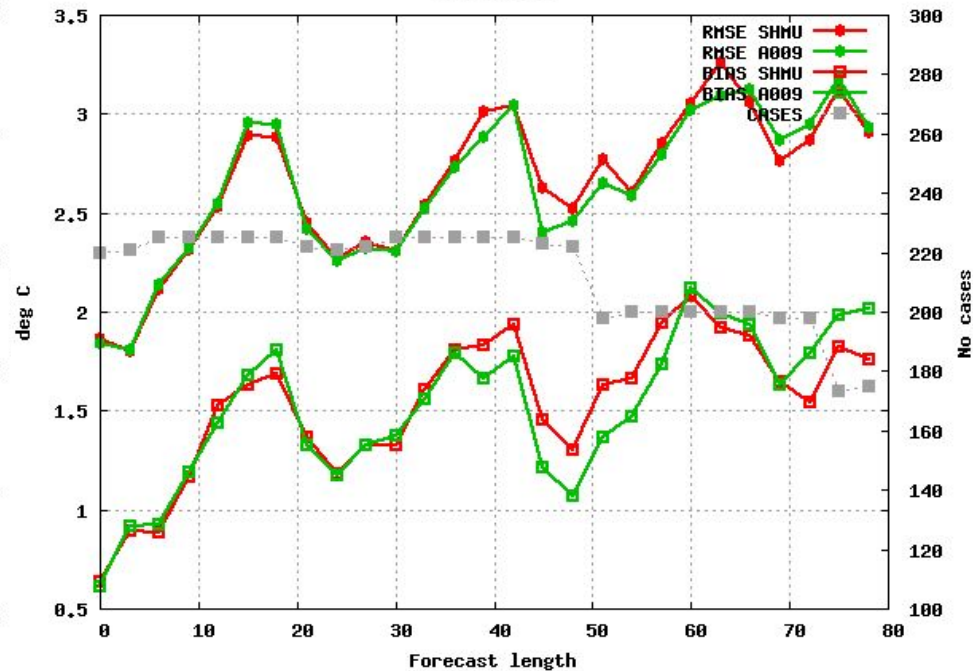

Td2m: OPER, TEST - generally neutral results, some improvement over SK

Selection: ALL using 1641 stations
Td2m Period: 20190613-20190621
Hours: {00}

all stations

Selection: Slovakia using 25 stations
Td2m Period: 20190613-20190621
Hours: {00}

Slovakia

Scores with all local AWS (+ bug corr)

3 days assim => 8 days (13-21/06/2019), 00 forecasts only.

OPER, **TEST** - positive impact for T2m_min, T2m_max scores

all stations, daily scores

Slovakia

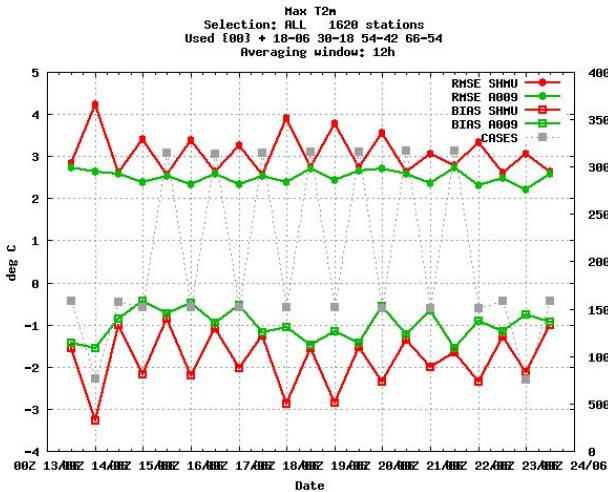

Slovakia

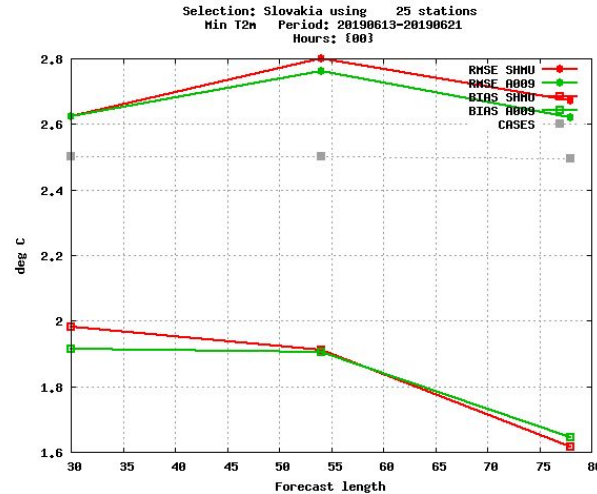

Scores with all local AWS (+ bug corr)

3 days assim => 8 days (13-21/06/2019), 00 forecasts only.

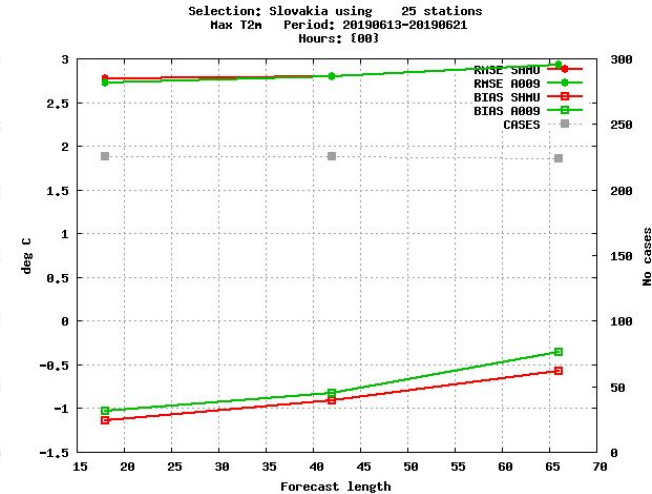

OPER, **TEST** - positive impact for T2m_min, T2m_max scores

all stations, daily scores

Slovakia

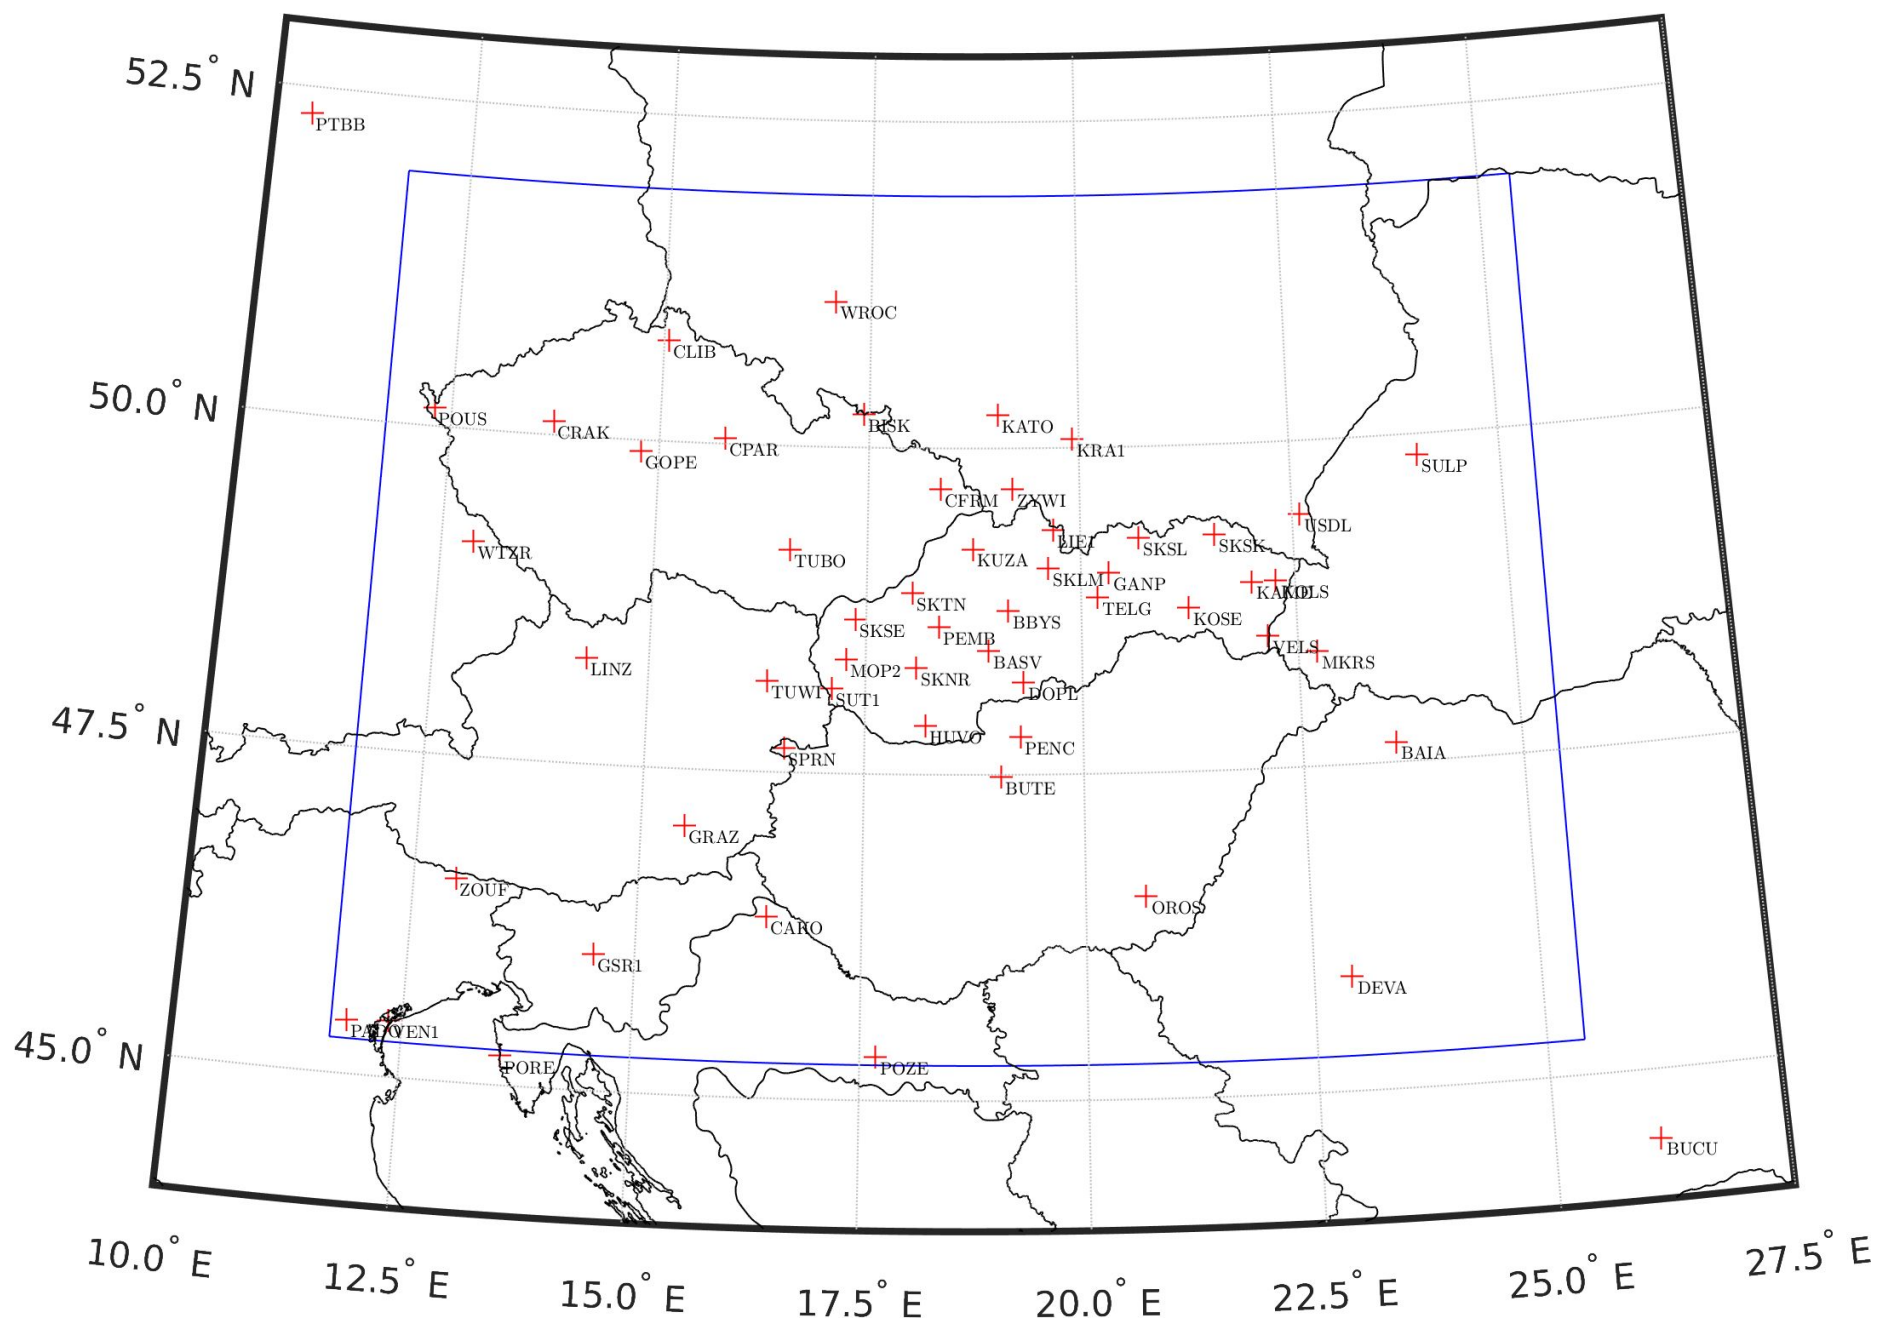

Slovakia

Not yet operational (waiting for AT+TB talk on Thursday)

Assimilation of GNSS ZTD @SHMU

REMINDER

- work of Martin Imrišek (PhD thesis) - cooperation with Slovak University of Technology, Dpt. of Theoretical Geodesy
 - local independent near real-time data processing of GNSS stations (only small portion of data goes to E-GVAP)
- AROME/SHMU 2 km/L73
 - 6 h assimilation cycling
 - B matrix downscaled from PEARP (2016 dataset by Tonda)
 - SYNOP, TEMP, AMDAR, AMV [ZTD]
- Simple white list method & static correction for each permanent GNSS station based on 15d OBS-GUESS statistics => selection of reliable stations (39/49)

Assimilation of GNSS ZTD @SHMU

- Half year (01.07.2018 00 UTC do 31.12.2018 18 UTC) evaluation of OBS-GUESS and OBS-ANA departures
- Statistical evaluation (see Martin's talk in Bucharest)
- DFS
- Scores wrt. ECMWF analyses
- Case studies
 - Scores wrt. observations
 - Precipitation forecasts

DFS statistics for ZTD experiments

Absolute (top) and relative (bottom) DFS for summer (left) and winter (right) day, 2 days selected - significant (blue) and non-significant (orange) weather

ZTD DA: statistics wrt ECMWF analyses

Mean specific humidity differences of AROME analyses and guesses of **+ZTD** and **-ZTD** experiments wrt ECMWF analyses over whole domain:

ZTD DA: statistics wrt ECMWF analyses

Mean specific humidity differences of AROME analyses and guesses of **+ZTD** and **-ZTD** experiments wrt ECMWF analyses over whole domain:

Mean Q [$1 \times 10^4 \text{ kg kg}^{-1}$]		analysis			guess		
		925 hPa	850 hPa	700 hPa	925 hPa	850 hPa	700 hPa
July 2018	+ZTD	-41.38	267.34	13.29	151.69	361.83	-5.86
	-ZTD	-61.65	246.37	-27.77	133.12	347.35	-35.79
	incr	20.28	20.97	41.07	18.57	14.48	29.93
Nov 2018	+ZTD	-140.51	-103.76	-44.92	-173.75	-110.70	-27.22
	-ZTD	-144.22	-104.34	-41.23	-177.96	-113.22	-27.91
	incr	3.71	0.58	-3.70	4.21	2.52	0.69

ZTD DA: statistics wrt ECMWF analyses

Mean specific humidity differences of AROME analyses and guesses of **+ZTD** and **-ZTD** experiments wrt ECMWF analyses over whole domain:

July 2018: positive impact of +ZTD in 925 and 700 hPa levels for analyses, deterioration for +ZTD guess statistics (feedback of convection?)

Nov 2018: values generally smaller (less q), overall improvement of +ZTD

Mean Q [1×10^4 kg kg ⁻¹]		analysis			guess		
		925 hPa	850 hPa	700 hPa	925 hPa	850 hPa	700 hPa
July 2018	+ZTD	-41.38	267.34	13.29	151.69	361.83	-5.86

(soon in OPLACE)

Summary and future plans

- Several parallelly ongoing activities, mostly devoted to high resolution data processing and testing, or surface analysis
- No algorithmic issues tackled for the time being

Summary and future plans

- Several parallelly ongoing activities, mostly devoted to high resolution data processing and testing, or surface analysis
- No algorithmic issues tackled for the time being
- Future plans depend on new HPC - financed by air quality project => aim is to provide high resolution analyses and forecasts
 - ~ 2-3 km resolution forecast; 3DVAR with RUC (a' 3h)
 - ~ 1 km resolution (or better?) hourly reanalyses
