PREP

Initialization in SURFEX

The PREP tool

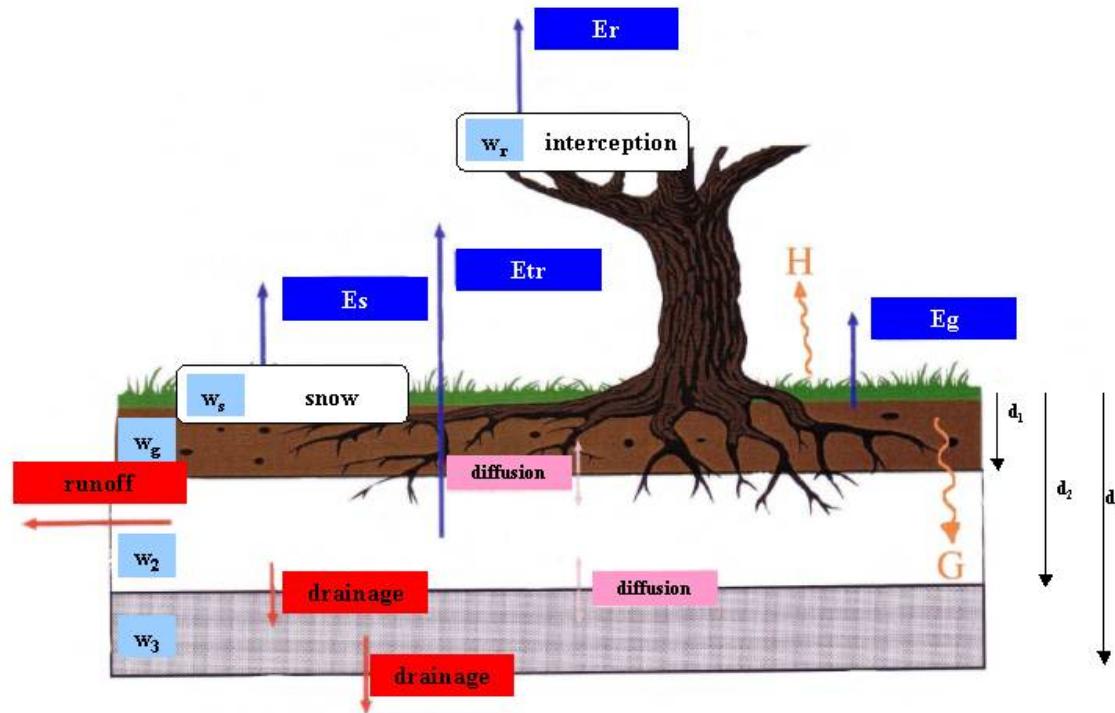

To initialize models prognostic variables for natural areas with **ISBA**, cities with **TEB**, lakes with **Flake** or **WATFLX** and sea/ocean with **CMO1D** or **SEAFLX**.

$$\frac{\partial X(t,s)}{\partial t} = F(t,s) \quad s = (x, y, z)$$

$$X(0,s) = ?$$

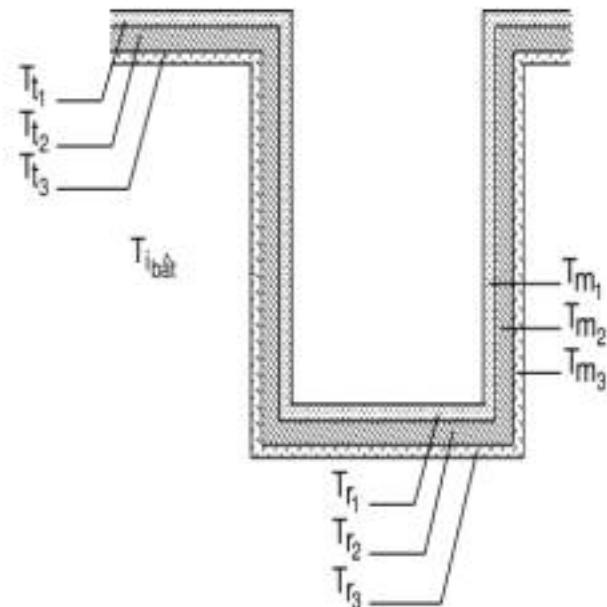

ISBA prognostic variables

- Vertical profiles of temperature, liquid and ice water contents
- Interception reservoir water content
- Snow water equivalent, albedo of snow...

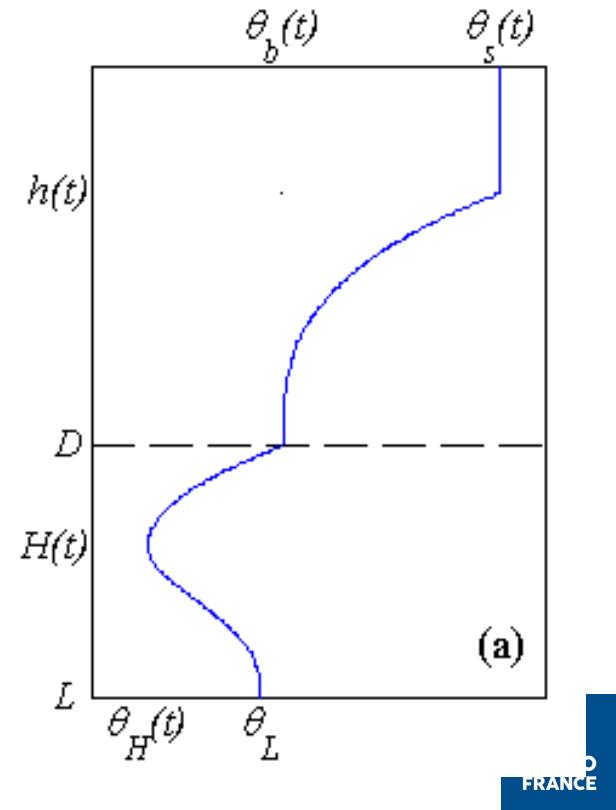

TEB prognostic variables

- Roof, walls and road temperatures
- Roof and road water contents
- Building internal temperature
- Snow

FLake Prognostic variables

- Surface, bottom, and mean water temperatures
- Mixing layer depth
- Shape of the thermocline profile
- Snow and ice thicknesses
- Snow and ice temperatures

CM01D prognostic variables

- Surface temperature
- Salinity
- Current
- Turbulent kinetic energy

WATFLX/SEAFLX prognostic variables

- Surface temperature
(constant during a forecast)

Initialization

- Uniform (values at z=0m)
 - Example: to initialize the surface temperature in ISBA
 - ▶ XTG_SURF=290.
 - Example: to initialize surface soil moisture to field capacity
 - ▶ XHUG_SURF=1.
- From a model forecast or analysis file
 - ECMWF, ARPEGE, ALADIN, AROME, MOCAGE, MERCATOR
 - Example of ISBA:
 - ▶ Reading of atmospheric fields, then projection on a detailed soil grid (20 layers)
 - ▶ Horizontal interpolations on the fine grid, then vertical interpolations on the target grid
 - ▶ Back to model variables
- From an external file of (lat, lon, value) type (ASCLLV):
 - ▶ Only available for some fields
 - ▶ CFILE_TG_SURF='tg_surf.dat' ; CTYPE_TG='ASCLLV'

Example 1: Initialization of tile variables from ECMWF file

```
&NAM_PREP_SURF_ATM  
CFILE='ecmwf.OD.20050526.18', CFILETYPE='GRIB' /  
&NAM_PREP_TEB  
CFILE_TEBC='ecmwf.OD.20050526.18', CTYPE='GRIB' /  
&NAM_PREP_SEAFLUX  
CFILE_SEAFLX='ecmwf.OD.20050526.18', CTYPE_SEAFLX='GRIB' /  
&NAM_PREP_WATFLUX  
CFILE_WATFLX='ecmwf.OD.20050526.18', CTYPE='GRIB' /  
&NAM_PREP_ISBA  
CFILE_ISBA='ecmwf.OD.20050526.18', CTYPE='GRIB' /
```

Example 2: Initialization of ISBA variables from external file

&NAM_PREP_ISBA

```
CFILE_ISBA = 'ecmwf.OD.20050526.18', CTYPE = 'GRIB',
CFILE_HUG_SURF = 'SWI1_SIM_2005052618_ALL',
CFILE_HUG_ROOT = 'SWI2_SIM_2005052618_ALL',
CFILE_HUG_DEEP = 'SWI3_SIM_2005052618_ALL',
CFILE_TG_SURF = 'TG1_SIM_2005052618_ALL',
CFILE_TG_ROOT = 'TG2_SIM_2005052618_ALL',
CFILE_TG_DEEP = 'TG3_SIM_2005052618_ALL',
CFILE_HUG = 'ASCLLV', CFILE_TG = 'ASCLLV'
```
